Molecules in Astrophysics: Probes and Processes Ewine F. van Dishoeck, 1997-04-30 Molecules are found in a large variety of astronomical environments ranging from comets in the solar system to galaxies at high redshift This book brings together astronomers physicists and chemists to discuss the use of molecules as probes of astrophysical parameters explore their role in the evolution of astronomical objects and study the basic chemical processes that occur in space The enormous progress in observational techniques is illustrated by studies of the physics and chemistry on scales comparable to the protosolar nebulae around high and low mass forming stars and planetary systems Elegant new experimental techniques for the measurement of gas phase reactions at low temperatures the analysis of spectra and the investigation of surface adsorbates on interplanetary dust particles and meteorites are presented the importance of accurate quantum chemical calculations is emphasized Present knowledge of the composition of dust grains and polycyclic aromatic hydrocarbons is summarized Other topics include models and observations of jets and outflows photon and X ray dominated regions masers in and outside our galaxy the comet D Shoemaker Levy collision with Jupiter the envelopes and photospheres of late type stars including brown dwarfs diffuse and translucent clouds and external galaxies ranging from the nearby Magellanic Clouds to distant quasar absorption line systems and starburst galaxies at the edge of the Universe **The Origin of Stars and Planetary Systems** Charles J. Lada, N.D. Kylafis, 2012-12-06 A few years after the publication of *The Physics of Star Formation and Early Stellar Evolution* we received a request from the publisher for an up dated second edition of this popular reference book As originally intended the volume had proved to be a useful text book for graduate astronomy courses and seminars which dealt with topics related to stellar origins The book was based on a series of lectures delivered by a distinguished group of leading researchers at a NATO Advanced Study Institute ASI held in May 1990 on the island of Crete Greece The primary goal of the ASI was in fact to produce a book which would simultaneously provide a broad and systematic overview of as well as a rigorous introduction to the fundamental physics and astronomy at the heart of modern research in star formation and early stellar evolution However by 1995 concern had arisen among those who used the text as a reference for graduate seminars and courses that the book would need to be updated to stay abreast of the discoveries and progress in this rapidly evolving field After some discussion we concluded that a new edition of the book was warranted and

that the goal of producing a new edition would be best accomplished by organizing a second ASI in Crete to review the progress in star formation research

The Molecular Astrophysics of Stars and Galaxies T. W. Hartquist, David A. Williams, 1998 This book provides a comprehensive survey of modern molecular astrophysics It includes an introduction to molecular spectroscopy and then addresses the main areas of current molecular astrophysics including galaxy formation star forming regions mass loss from young as well as highly evolved stars and supernovae starburst galaxies plus the tori and discs near the central engines of active galactic nuclei All chapters have been written by invited authors who are acknowledged experts in their fields The thorough editorial process has ensured a uniformly high standard of exposition and a coherent style The book is unique in giving a detailed view of its wide ranging subject It will provide the standard introduction for research students in molecular astrophysics The book will be read by research astronomers and astrophysicists who wish to broaden the basis of their knowledge or are moving their activities into this burgeoning field It will enable chemists to learn the astrophysics most related to chemistry as well as instruct physicists about the molecular processes most important in astronomy

Laboratory Astrophysics and Space Research P. Ehrenfreund, C. Krafft, H. Kochan, Valerio Pirronello, 2012-12-06 The book presents the most recent developments of laboratory studies in astrophysics and space research The individual chapters review laboratory investigations under simulated space conditions studies for the design of successful space experiments or for supporting the interpretation of astronomical and space mission recorded data Related theoretical models numerical simulations and in situ observations demonstrate the necessity of experimental work on the Earth's surface The expertise of the contributing scientists covers a broad spectrum and is included in general overviews from fundamental science to recent space technology The book intends to serve as a reference for researchers and graduate students on the most recent activities and results in laboratory astrophysics and to give reviews of their applications in astronomy planetology cosmochemistry space research and Solar System exploration

Astronomical Spectroscopy: An Introduction To The Atomic And Molecular Physics Of Astronomical Spectroscopy (Third Edition) Jonathan Tennyson, 2019-04-17 The first two editions of this textbook have received well deserved high acclaims and this the third edition deserves no less Its explanations of the whole gamut of atomic and molecular spectroscopy provide a solid grasp of the theory as well as how to understand such spectra in practice It thus makes an ideal companion to books that start from the observational aspect of spectroscopy whether in the lab or at the telescope This new edition of Tennyson's book ought to be in the library of every astronomical department The Observatory Magazine It closely follows the course given to third year UCL undergraduates and the worked examples have surely been tested on students The last two chapters serve as an effective appendix on more specialised topics in atomic and molecular theory Contemporary Physics The third edition of Astronomical Spectroscopy examines the physics necessary to understand and interpret astronomical spectra It offers a step by step guide to the atomic and molecular physics involved in providing astronomical spectra starting from the relatively

simple hydrogen atom and working its way to the spectroscopy of small molecules Based on UCL course material this book uses actual astronomical spectra to illustrate the theoretical aspects of the book to give the reader a feel for such spectra as well as an awareness of what information can be retrieved from them It also provides comprehensive exercises with answers given to aid understanding

Astrophysics and Space Science L.B.F.M. Waters,C. Waelkens,Karel A. van der Hucht,P.A. Zaal,1998-08-31 This conference proceedings contains review papers and contributed papers discussing early results from the Infrared Space Observatory ISO on the subject of stellar evolution Three topics have been emphasized in the book young stellar objects and Vega type stars circumstellar matter of massive stars and late stages of stellar evolution The very rich harvest of new results from ISO is demonstrated by the many discoveries of new solid state and molecular bands in the spectra of stars and circumstellar shells and by spectacular images of circumstellar and interstellar matter The book is intended for professional astronomers and students

Chemistry as a Diagnostic of Star Formation National Research Council Canada,2003 This publication contains presentations studies of fundamental chemical processes both in the lab an exploration of the connections between chemistry the unique problems of high mass star formation the formation of hydrogen deuterated molecules molecular depletion observations accretion disks interstellar dust and the chemistry physical conditions structure of dark clouds Includes indexes of subjects authors astronomical objects

Solid State Astrochemistry Valerio Pirronello,Jacek Krelowski,Giulio Manicò,2012-12-06 The fundamental role that Astrochemistry plays into regulating the processes that in interstellar clouds lead to the formation of stars and how these processes concur into affecting the shape and the dynamics of galaxies and hence into showing the Universe in the way it appears to us is well established Together with those occurring in the gas phase a special relevance is recognized to processes that involve interstellar dust grains the solid component of matter diffused among stars The school on Solid State Astrochemistry held at the Ettore Majorana Centre for Scientific Culture in Erice Sicily from the 5th to the 15th of June 2000 was the fifth course of the International School of Space Chemistry In spite of its very focused aim it was attended by 66 participants from 17 different countries that in the very special environment provided by the Majorana Centre discussed in great details the various aspects of the subject

Astrobiology: Future Perspectives P. Ehrenfreund,W.M. Irvine,T. Owen,Luann Becker,Jen Blank,J.R. Brucato,Luigi Colangeli,Sylvie Derenne,Anne Dutrey,Didier Despois,Antonio Lazcano,Francois Robert,2006-03-05 Astrobiology a new exciting interdisciplinary research field seeks to unravel the origin and evolution of life wherever it might exist in the Universe The current view of the origin of life on Earth is that it is strongly connected to the origin and evolution of our planet and indeed of the Universe as a whole We are fortunate to be living in an era where centuries of speculation about the two ancient and fundamental problems the origin of life and its prevalence in the Universe are being replaced by experimental science The subject of Astrobiology can be approached from many different perspectives This book is focused on abiogenic organic matter from the viewpoint of astronomy and planetary science and considers its potential relevance to

the origins of life on Earth and elsewhere Guided by the review papers in this book the concluding chapter aims to identify key questions to motivate future research and stimulate astrobiological applications of current and future research facilities and space missions Today s rich array of new spacecraft telescopes and dedicated scientists promises a steady flow of discoveries and insights that will ultimately lead us to the answers we seek

Cometary Science after Hale-Bopp Hermann Böhnhardt,Michael Combi,Mark R. Kidger,Rita Schulz,2013-04-17 Comet Hale Bopp defines a milestone event for cometary science it is the first really big comet observed with modern equipment on the ground and from space and due to that it is considered the new reference object in cometary sciences At the beginning of a new era in spacecraft exploration of comets and five years after Hale Bopp s perihelion passage these proceedings of invited and contributed papers for IAU Colloquium 186 *Cometary Science after Hale Bopp* review the state of the art knowledge on comets the icy dusty and most primordial leftovers of the formation disk of our own solar system

Astrobiology Julian Chela-Flores,Guillermo A. Lemarchand,John Oró,2012-12-06 The general topic of this book concerns the origin evolution distribution and destiny of life in the Universe It discusses the transition from inert matter to cellular life and its evolution to fully developed intelligent beings and also the possibility of life occurring elsewhere particularly in other environments in our own and other solar systems The theoretical framework of Astrobiology may be probed with a forthcoming series of space missions which at the time of writing are being planned for the next 10 to 15 years Advanced extraterrestrial life can also be probed by means of radioastronomy in the well established project of search for extraterrestrial intelligence Astrobiology pays special attention to the robust growth in our capacity to search for microorganisms as well as signals of extraterrestrial life with recent significant technological progress in planetary science and radioastronomy The progress of the main space agencies is highlighted Audience This volume is aimed at advanced undergraduate and graduate students as well as researchers in the many areas of basic earth and life sciences that contribute to the study of chemical evolution and the origin of life

Cyclical Variability in Stellar Winds Lex Kaper,Alexander W. Fullerton,2013-06-05 It is well known that stellar winds are variable and the fluctuations are often cyclical in nature This property seems to be shared by the winds of cool and hot stars even though their outflows are driven by fundamentally different physical mechanisms Since very similar models have been proposed to explain the cyclical wind variations observed in a wide variety of stars the time was ripe for astrophysicists from many different sub disciplines to present the state of the art in a concise form The proceedings will provide a useful up to date overview of the observations interpretation and modelling of the time dependent mass outflows from all sorts of stars

The Chemical Evolution of Phosphorus Enrique Macia-Barber,2019-11-21 Here is a fascinating reader friendly exploration of the phosphorus enigma The volume attempts to answer the questions How did phosphorus atoms which are produced inside the inner cores of a handful of huge stars become concentrated in relatively high proportions in the organisms composing Earth s biosphere And how did these phosphate derivatives manage to be included in such a great variety of organic molecules playing essential

biochemical roles in all known life forms Due to the interdisciplinary nature of the topic the volume is arranged in three sections The first section introduces the fundamental concepts and notions of physics chemistry and biology necessary for the proper understanding of the topics discussed within an astronomical framework The author then focuses on the role of phosphorus and its compounds within the context of chemical evolution in galaxies considering its relevance in most essential biochemical functions as well as its peculiar chemistry under different physicochemical conditions The third section provides an overall perspective on the role of phosphorus and its compounds in current areas of research of solid state physics materials engineering nanotechnology or medicine *Planetary Nebulae* Harm J. Habing, Henny J.G.L.M.

Lamers, 2012-12-06 Planetary nebulae present a fascinating range of shapes and morphologies They are ideal laboratories for the study of different astrophysical processes atomic physics radiative transfer stellar winds shocks wind wind interaction and the interaction between stellar winds and the interstellar medium In addition planetary nebulae provide information about the late stages of stellar evolution In the last five years studies of planetary nebulae have progressed very rapidly and new phenomena and insights have been gained This is partly due to new observations e g from the Hubble Space Telescope the ISO satellite and new infrared and millimeter spectrographs and partly to the advancement of hydrodynamic simulations of the structures of planetary nebulae PN Many of these new results were reported at IAU Symposium 180 in Groningen the Netherlands on August 26 to 30 1996 This symposium was dedicated to one of the pioneers of PN research Stuart Pottasch These proceedings contain chapters on Introduction to PN with the basic parameters Distances of PN The central stars of PN The envelopes of PN The evolution from AGB to PN The evolution from PN to white dwarfs PN in the galactic context PN in extragalactic systems The future of PN research The book contains 29 reviews and more than 200 shorter contributions

The Century of Space Science J.A. Bleeker, Johannes Geiss, M. Huber, 2012-12-06 One of the most attractive features of the young discipline of Space Science is that many of the original pioneers and key players involved are still available to describe their field Hence at this point in history we are in a unique position to gain first hand insight into the field and its development To this end *The Century of Space Science* a scholarly authoritative reference book presents a chapter by chapter retrospective of space science as studied in the 20th century The level is academic and focuses on key discoveries how these were arrived at their scientific consequences and how these discoveries advanced the thoughts of the key players involved With over 90 world class contributors such as James Van Allen Cornelis de Jager Eugene Parker Reimar Lüst and

Ernst Stuhlinger and with a Foreword by Lodewijk Woltjer past ESO Director General this book will be immensely useful to readers in the fields of space science astronomy and the history of science Both academic institutions and researchers will find that this major reference work makes an invaluable addition to their collection Astrochemistry: Recent Successes and Current Challenges (IAU S231) International Astronomical Union. Symposium, International Astronomical Union, 2006-04-27 An up to date survey of astrochemistry in the early years of the twenty first century For researchers and graduate students **Formation and Evolution of Solids in Space** J. Mayo Greenberg, Aigen Li, 2012-12-06 Interstellar dust meteorites interplanetary dust particles IDP s the zodiacal light comets comet dust Where do they come from what are they made of how do they evolve and finally are there connections between them These are the questions discussed in this volume by some of the world s outstanding experts in their respective fields The techniques used for studying the small solid objects of space are thoroughly discussed Some of the methods involve a synthetic approach using the laboratory to create analog environments and materials which are believed to resemble those in space Others use direct laboratory methods with state of the art analytical tools to study the material of the objects themselves meteorites IDP S And others apply the latest in astronomical facilities to provide quantitative data on the material properties of the solids which can only be deduced from remote observations These are compared with the laboratory results In one instance there was a possibility to study a solar system body in situ and that was the case of comet Halley and some of the results of these studies obtained from space laboratories launched to meet it are discussed here Finally there are theoretical papers which are aimed at bridging the results of observational and laboratory methods This book is recommended to senior scientists as well as graduate students who wish to pursue research in interstellar and solar system astronomy and their connections
