methods for the analysis of high temperature materials Thorium Energy for the World Jean-Pierre Revol, Maurice Bourquin, Yacine Kadi, Egil Lillestol, Jean-Christophe de Mestral, Karel Samec, 2016-04-05 The Thorium Energy Conference ThEC13 gathered some of the world's leading experts on thorium technologies to review the possibility of destroying nuclear waste in the short term and replacing the uranium fuel cycle in nuclear systems with the thorium fuel cycle in the long term. The latter would provide abundant reliable and safe energy with no CO₂ production, no air pollution and minimal waste production. The participants' representatives of 30 countries included Carlo Rubbia Nobel Prize Laureate in physics and inventor of the Energy Amplifier, Jack Steinberger Nobel Prize Laureate in physics, Hans Blix former Director General of the International Atomic Energy Agency (IAEA), Rolf Heuer Director General of CERN, Pascal Couchepin former President of the Swiss Confederation and Claude Haegi President of the FEDRE, to name just a few. The ThEC13 proceedings are a source of reference on the use of thorium for energy generation. They offer detailed technical reviews of the status of thorium energy technologies from basic R & D to industrial developments. They also describe how thorium can be used in critical reactors and in subcritical accelerator driven systems (ADS), answering the important questions: Why is thorium so attractive and what is the role of innovation in particular in the nuclear energy domain? What are the national and international R & D programs on thorium technologies and how are they progressing? ThEC13 was organized jointly by the international Thorium Energy Committee (iThEC), an association based in Geneva, and the International Thorium Energy Organisation (IThEO). It was held in the Globe of Science and Innovation at the European Organization for Nuclear Research (CERN), Geneva, Switzerland, in October 2013.

High Temperature Corrosion César A. C. Sequeira, 2019-01-23 Reviews the science and engineering of high temperature corrosion and provides guidelines for selecting the best materials for an array of system processes. High temperature corrosion (HTC) is a widespread problem in an array of industries including power generation, aerospace, automotive and mineral and chemical processing, to name a few. This book provides engineers, physicists and chemists with a balanced presentation of all relevant basic science and engineering aspects of high temperature corrosion. It covers most HTC types including oxidation, sulfidation, nitridation, molten salts, fuel ash corrosion, H₂S, H₂ corrosion, molten fluoride, HF corrosion and carburization. It also provides corrosion data essential for making the appropriate choices of candidate materials for high temperature service in process conditions. A form of corrosion that does not require the presence of liquids, high temperature corrosion occurs due to the interaction at high temperatures of gases, liquids or solids with materials. HTC is a subject of increasing importance in many areas of science and engineering and students, researchers and engineers need to be aware of the nature of the processes that occur in high temperature materials and equipment in common use today, especially in the chemical, gas, petroleum, electric power, metal manufacturing, automotive and nuclear industries. Provides engineers and scientists with the essential data needed to make the most informed decisions on materials selection. Includes up to date information accompanied by more than 1 000 references, 80% of which from within the past fifteen years.

Includes details on systems of critical engineering importance especially the corrosion induced by low energy radionuclides
Includes practical guidelines for testing and research in HTC along with both the European and International Standards for high temperature corrosion engineering Offering balanced in depth coverage of the fundamental science behind and engineering of HTC High Temperature Corrosion Fundamentals and Engineering is a valuable resource for academic researchers students and professionals in the material sciences solid state physics solid state chemistry electrochemistry metallurgy and mechanical chemical and structural engineers
