doesn't require a fixed schema. It can achieve this through the use of JSON documents. MongoDB is also a cross platform DBMS currently supporting Windows, Mac, Solaris and various Linux distributions at the time of writing. A MongoDB database is different to a relational database in that MongoDB uses a document oriented model to store data. In the document oriented model, data is stored within documents of a collection. In the relational model, data is stored within rows of a table. Good luck!
