Alarm.com Image Sensor

PRODUCT SUMMARY

This Image Sensor is a pet immune PIR (passive infrared) motion detector with a built-in camera. The sensor is designed to capture images during alarm or non-alarm events when motion is detected. Users can also initiate image capture on demand to Peek-in on their property. Images are stored locally and uploaded either automatically when motion is captured during alarm events or manually when requested by the user. Once uploaded, images are available for viewing on the Alarm.com Website or on Alarm.com Smart phone app. The sensor is battery powered, all wireless and simple to install and operate. Both an Alarm.com module and subscription to an Alarm.com service plan are required.

Highlight Features

- Battery operated
- Communicates wirelessly to the security control panel
- 35 feet by 40 feet detection coverage area
- Configurable PIR sensitivity and pet immunity settings
- Image: QVGA 320x240 pixels
- Color images (except in night vision)
- Night vision image capture with infrared flash (black & white)
- Tamper detection, walk test mode, supervision

Service Plan Options

Image capture features require either an Alarm.com Basic or Advanced Interactive Service Plan and one of the following Image Sensor add-ons:
- Image Sensor Alarm: Includes upload of images from alarm events only.
- Image Sensor Plus: Includes upload of images from alarm events and non-alarm events. User can configure Daily View schedules to receive images automatically each day or Peek-in to initiate an on-demand image capture immediately, or when the next motion occurs. Users can also request images that are captured automatically while the system is Armed Away or following a Disarm from an Armed Away state. Up to 40 captured events can be uploaded per month. Additional image uploads may be added in increments of 20 at an additional charge.

HARDWARE COMPATIBILITY

- Security Control Panel: Interlogix (Simon XT v1.3 or higher or XTi v1.0 or higher)
- Alarm.com Module: Simon XT Module with firmware 1.65 or higher (XTi requires module with Sensors 781 or higher)
- Required Daughterboard: Image Sensor daughterboard (attached to compatible Alarm.com module)
- Available Zones: One zone per Image Sensor installed. On the Simon XT only, one additional zone is required for the required daughterboard. Up to three Image Sensors may be added per system. (Note: The Alarm.com GSM Module #4 is required to use both Image Sensor and enerGen™.)

HARDWARE INSTALLATION

1. Create Alarm.com Customer Account: Select service plan including Image Sensor add-ons and register the Alarm.com module serial number on the Dealer Website.

2. Install Image Sensor Daughterboard: Locate the connector on the back of the daughterboard. Remove the green backing from the daughterboard mounting adhesive. While the module is powered down, align the daughterboard and module connector. Press to secure. (NOTE: Verify module compatibility before attaching. Once attached, daughterboard is difficult to remove and removing may damage hardware.)

3. Install Alarm.com Module inside Control Panel.

4. FOR SIMON XT ONLY, Connect Daughterboard Alarm Wire: On the XT panel, the blue alarm hardwire is not required and should not be connected. For XTi panels, skip to step 5. When using the Simon XT panel, you must connect the included blue wire from the "HW" hardwire output located on the daughterboard (use "HW" not "C") to the "HWG IN" terminal (terminal 2) slot on the Simon XT panel to enable local alarm activations. Once an Image Sensor has been enrolled into the panel, a hardwire zone will automatically be programmed as "Sensor 39: GSW." To ensure alarms are tripped properly on Image Sensors according to their enrolled group, the hardwire contact group is automatically configured. Do NOT alter the sensor group of "Sensor 39 GSW." (Note: On the Simon XT, the panel screen will display "Sensor 39: GSW Alarm" regardless of which Image Sensor tripped the alarm. The Alarm.com Website & notifications, and the central station report will indicate the specific Image Sensor that tripped the alarm.)

5. Route Daughterboard Antenna: It is important to be sure that daughterboard antenna is pulled away from the Alarm.com module. Follow the panel-specific antenna routing guidelines to optimize sensor range.

Simon XT: The antenna should be pulled down off the Alarm.com module and routed in a "J" shape to the left towards the corner of the panel (when looking at the panel from behind).

Simon XTi: Bend the antenna at a 90° angle ½ of an inch from the edge of the daughterboard. The daughterboard antenna should rest inside the panel's plastic overlay installed in the panel.

6. Register Module and Test: Power the panel and initiate a comm-test to ensure the Alarm.com module is properly installed and communicating with the Alarm.com NOC.

7. Enroll Sensor in Panel:

Simon XT: To enroll the sensor on a Simon XT, follow these steps at the control panel:

a. Begin with the batteries removed from the sensor.
b. On the panel, scroll until the screen displays "System Programming," and press OK.
c. Enter the installer code (default 4-3-2-1), and press OK.
d. Scroll up to "Interactive Services," press OK.
e. Scroll down to "Image Sensor Setup," press OK.
f. Scroll to "Image Sensor Learn Mode," press OK. The screen should display "Power up or install I.S. now."
g. Insert the batteries into the sensor. Wait (approximately 30 seconds) for the control panel screen to display: "I.S. [x] Added as Sensor [x]." The LED on the sensor will turn solid for ~5 seconds once the sensor has enrolled.
h. Perform another panel comm-test to be sure that Alarm.com receives the updated device equipment list. This will speed up the sensor installation process.

The sensor is now learned into the panel. Sensors are enrolled in group 17 by default. To change the sensor group, use the Sensors menu in System Programming. Image Sensors may be enrolled in groups 15, 17, 20, or 25. (No choice issued for group 25.) On the Simon XT, a mix of sensor groups 15/17 and 20 are not supported. If Image Sensors are in group 15 or 17, they cannot also be in group 20, and vice versa. After enrollment, be sure to keep the sensor and panel powered so the sensor can complete an initialization process with the Alarm.com Network Operations Center. This process will take several minutes. Images cannot be captured until initialization is complete.
