Elements of Artificial Neural Networks Kishan Mehrotra, Chilukuri K. Mohan, Sanjay Ranka, 1997 Elements of Artificial Neural Networks provides a clearly organized general introduction focusing on a broad range of algorithms for students and others who want to use neural networks rather than simply study them The authors who have been developing and team teaching the material in a one semester course over the past six years describe most of the basic neural network models with several detailed solved examples and discuss the rationale and advantages of the models as well as their limitations The approach is practical and open minded and requires very little mathematical or technical background Written from a computer science and statistics point of view the text stresses links to contiguous fields and can easily serve as a first course for students in economics and management The opening chapter sets the stage presenting the basic concepts in a clear and objective way and tackling important yet rarely addressed questions related to the use of neural networks in practical situations Subsequent chapters on supervised learning single layer and multilayer networks unsupervised learning and associative models are structured around classes of problems to which networks can be applied Applications are discussed along with the algorithms A separate chapter takes up optimization methods The most frequently used algorithms such as backpropagation are introduced early on right after perceptrons so that these can form the basis for initiating course projects Algorithms published as late as 1995 are also included All of the algorithms are presented using block structured pseudo code and exercises are provided throughout Software implementing many commonly used neural network algorithms is available at the book's website Transparency masters including abbreviated text and figures for the entire book are available for instructors using the text

**Neural Networks: Tricks of the Trade** Genevieve B. Orr,Klaus-Robert Müller,2003-07-31 It is our belief that researchers and practitioners acquire through experience and word of mouth techniques and heuristics that help them successfully apply neural networks to di cult real world problems Often these tricks are theo tically well motivated Sometimes they are the result of trial and error However their most common link is that they are usually hidden in people s heads or in the back pages of space constrained conference papers As a result newcomers to the eld waste much time wondering why their networks train so slowly and perform so poorly This book is an outgrowth of a 1996 NIPS workshop called Tricks of the Trade whose goal was to begin the process of gathering and documenting these tricks The interest that the workshop generated motivated us to expand our collection and compile it into this book Although we have no doubt that there are many tricks we have missed we hope that what we have included will prove to be useful particularly to those who are relatively new to the eld Each chapter contains one or more tricks presented by a given author or authors We have attempted to group related chapters into sections though we recognize that the di erent sections are far from disjoint Some of the chapters e g 1 13 17 contain entire systems of tricks that are far more general than the category they have been placed in
