Cecil R. Reynolds, Associate Editor

Texas A & M University

Neurobehavioral Recovery from Head Injury, by H. S. Levin, J. Grafman, and H. M. Eisenberg. New York: Oxford University Press, 1987.

This edited text is an outgrowth of a conference held at the University of Texas Medical Branch in Galveston in May 1985 entitled "Neurobehavioral Recovery from Head Injury." It is also a follow-up companion text to the previously published book by Levin, Benson, and Grossman (1983) on the "Neurobehavioral Consequences of Closed Head Injury," also published by Oxford University Press.

With the emergence of regional trauma centers, improved acute and post-acute treatment of the traumatic brain injury (TBI) survivor the emphasis in head trauma is now with recovery, particularly long-term recovery. It is with this issue of recovery that this text attempts to address. Its stated goals are to be an "informative guide to both recent research and directions for future studies concerning the neurobehavioral recovery from head injury."

The book is divided into eight sections. Section I, entitled "Methodological Issues in Clinicopathological Correlation of Head Injury in Outcome Studies," is comprised of four chapters. By today's standards of sophistication, it is difficult to imagine a time when there was limited or no standardization for degree and type of TBI or outcome. To put this in its historical perspective, Eisenberg and Weiner (Chapter 2) review the development of the Glasgow Coma (GCS) and outcome scales (GOS). Because of these rather straightforward standardizations, considerable progress has been made towards assessing the degree of original brain injury and potential outcome. Langfitt et al. (Chapter 3) interrelate the GCS, computerized tomography (CT), Magnetic resonance imaging (MRI), positron emission tomography (PET) and cerebral blood flow (CBF) studies with neuropsychological findings in two patients with severe TBI. The cases presented in this chapter are extremely informative and well illustrated. The only drawback with this chapter is the limitation that occurs with any case study in terms of limited generalizability. The concluding chapter in this section is by Grafman and Salazar (Chapter 4) which provides an erudite discussion of the differing effects of penetrating versus closed head injury (CHI). These authors discuss the importance of distinguishing between penetrating versus nonpenetrating head injury in research protocols because, despite their com-
