Behavioral Economics and Neuroeconomics of Health and Healthcare Reddy, K. Jayasankara, 2024-09-13 Given the stress of interacting with healthcare systems be it a result of fear expense or confusion individuals may make decisions that are not in their best interest There exists an intricate interplay between behavioral economics neuro economics health and healthcare Until recently an examination of these interconnected factors has been nonexistent even though understanding

them is vital for proper healthcare administration and top level patient care Behavioral Economics and Neuroeconomics of Health and Healthcare explores the underlying psychological and neurological factors that influence individual choices related to health and healthcare Drawing from a rich pool of research the book provides a comprehensive understanding of how cognitive biases emotional factors and social influences contribute to health related decisions and outcomes Not only does the book detail these psychological and neurological drivers of behavior but it features effective interventions to improve health outcomes and offer practical implications for healthcare practitioners and policymakers

Foundations of Neuroeconomic Analysis Paul W. Glimcher, 2010-11-24 A new academic field neuroeconomics has emerged at the border of the social and natural sciences In Foundations of Neuroeconomic Analysis Paul Glimcher argues that a meaningful interdisciplinary synthesis of the study of human and animal choice is not only desirable but also well underway and so it is time to formally develop a foundational approach for the field He does so by laying the philosophical and empirical groundwork and integrating the theory of choice and valuation with the relevant physical constraints and mechanisms

Neuroeconomic and Behavioral Aspects of Decision Making Kesra Nermend, Małgorzata Łatuszyńska, 2017-10-06 This proceedings volume presents the latest scientific research and trends in experimental economics with particular focus on neuroeconomics Derived from the 2016 Computational Methods in Experimental Economics CMEE conference held in Szczecin Poland this book features research and analysis of novel computational methods in neuroeconomics Neuroeconomics is an interdisciplinary field that combines neuroscience psychology and economics to build a comprehensive theory of decision making At its core neuroeconomics analyzes the decision making process not only in terms of external conditions or psychological aspects but also from the neuronal point of view by examining the cerebral conditions of decision making The application of IT enhances the possibilities of conducting such analyses Such studies are now performed by software that provides interaction among all the participants and possibilities to register their reactions more accurately This book examines some of these applications and methods Featuring contributions on both theory and application this book is of interest to researchers students academics and professionals interested in experimental economics neuroeconomics and behavioral economics

Neuroeconomics, Judgment, and Decision Making Evan A. Wilhelms, Valerie F.

Reyna, 2014-07-11 This volume explores how and why people make judgments and decisions that have economic consequences and what the implications are for human well being It provides an integrated review of the latest research from many different disciplines including social cognitive and developmental psychology neuroscience and neurobiology and economics and business The book has six areas of focus historical foundations cognitive consistency and inconsistency heuristics and biases neuroeconomics and neurobiology developmental and individual differences and improving decisions Throughout the contributors draw out implications from traditional behavioral research as well as evidence from neuroscience In recent years neuroscientific methods have matured beyond being simply correlational and descriptive into

theoretical prediction and explanation and this has opened up many new areas of discovery about economic behavior that are reviewed in the book. In the final part there are applications of the research to cognitive development, individual differences and the improving of decisions. The book takes a broad perspective and is written in an accessible way so as to reach a wide audience of advanced students and researchers interested in behavioral economics and related areas. This includes neuroscientists, neuropsychologists, clinicians, psychologists, developmental social and cognitive economists and other social scientists, legal scholars and criminologists, professionals in public health and medicine, educators, evidence based practitioners and policy makers.

Neuroeconomics Peter Politser, 2008-03-12 As technology has opened new windows into the brain it has clarified what happens there when people make decisions about money. This clarity has produced a new science called neuroeconomics which addresses diverse questions such as why people save, buy stocks, steal and overspend. The many different methods used in neuroeconomics have however often yielded unclear findings about the quality of these decisions primarily because the field has lacked both guidelines for categorizing the different aspects of quality and guidelines for selecting methods to study these aspects. Before this book in which Peter Politser guides the reader through the different regions of study there was no scientific guide for those interested in neuroeconomics. Politser shows how to evaluate specific elements of choice such as regret, expectation, risk, ambiguity, time preference and learning and surveys economic and behavioral models of decision making skills. He reviews the neural correlates of decisional impairments and inconsistencies, clarifying for example why we do not recall what we experience, experience what we expect or like, what we want and provides detailed tables of decision making skills, their neural correlates and possible impairments. Politser also considers what the field of neuroeconomics may add to future conceptions of decision making and outlines the limitations of various studies of different capacities. He then introduces a broader field for the design and interpretation of neuroeconomic studies: a neuroepidemiology of decision making. Everyone who wants to understand the research in neuroeconomics or use its methods should read this book. Its accessible text along with an extensive glossary will guide those with little economic or neuroscience background and make the book an excellent supplement for courses on neuroscience and decision making.

Social Neuroeconomics Jens Harbecke, Carsten Herrmann-Pillath, 2020-09-23 Neuroeconomics has emerged as a paradigmatic field where neuroscience and the social sciences are integrated in one analytical and empirical approach. However, the different disciplines involved often only relate to each other via the shared object of research and less through the constructing of precise models of integrative mechanisms. Social Neuroeconomics explores the potential of philosophical and methodological reflections in the neurosciences and the social sciences to inform those efforts at cross disciplinary integration with a special focus on recent contributions to mechanistic explanations. The collected essays are drawn from the fields of neuroscience, psychology, economics, sociology and philosophy and examine the ways and methods of constructing unified conceptual frameworks that can guide empirical work and hypothesis building. This is demonstrated in a range of

applications particularly regarding finance and consumer behavior The concept of the social brain is also explored a multilevel framework in which complex analytical categories such as emotions or socially mediated cognitive processes connect neuronal and social phenomena in specific mechanisms that generate behavior This book addresses a wide audience across the various disciplines reaching from the neurosciences to the social sciences and philosophy Altered States of Consciousness Marc Wittmann, 2023-11-07 What altered states of consciousness the dissolution of feelings of time and self can tell us about the mystery of consciousness During extraordinary moments of consciousness shock meditative states and sudden mystical revelations out of body experiences or drug intoxication our senses of time and self are altered we may even feel time and self dissolving These experiences have long been ignored by mainstream science or considered crazy fantasies Recent research however has located the neural underpinnings of these altered states of mind In this book neuropsychologist Marc Wittmann shows how experiences that disturb or widen our everyday understanding of the self can help solve the mystery of consciousness Wittmann explains that the relationship between consciousness of time and consciousness of self is close in extreme circumstances the experiences of space and self intensify and weaken together He considers the emergence of the self in waking life and dreams how our sense of time is distorted by extreme situations ranging from terror to mystical enlightenment the experience of the moment and the loss of time and self in such disorders as depression schizophrenia and epilepsy Dostoyevsky reported godly bliss during epileptic seizures neurologists are now investigating the phenomenon of the epileptic aura Wittmann describes new studies of psychedelics that show how the brain builds consciousness of self and time and discusses pilot programs that use hallucinogens to treat severe depression anxiety and addiction If we want to understand our consciousness our subjectivity Wittmann argues we must not be afraid to break new ground Studying altered states of consciousness leads us directly to the heart of the matter time and self the foundations of consciousness CFA

Handbook of Experimental Economic Methodology Guillaume R. Fréchette, A. Schotter, 2015 The Handbook of Experimental Economic Methodology edited by Guillaume R Fr chette and Andrew Schotter aims to confront and debate the issues faced by the growing field of experimental economics For example as experimental work attempts to test theory it raises questions about the proper relationship between theory and experiments As experimental results are used to inform policy the utility of these results outside the lab is questioned and finally as experimental economics tries to integrate ideas from other disciplines like psychology and neuroscience the question of their proper place in the discipline of economics becomes less clear This book contains papers written by some of the most accomplished scholars working at the intersection of experimental behavioral and theoretical economics talking about methodology It is divided into four sections each of which features a set of papers and a set of comments on those papers The intention of the volume is to offer a place where ideas about methodology could be discussed and even argued Some of the papers are contentious a healthy sign of a dynamic discipline while others lay out a vision for how the authors think experimental economics should be pursued This exciting and illuminating collection of papers brings light to a topic at the core of experimental economics Researchers from a broad range of fields will benefit from the exploration of these important questions
