LaRue,2013-06-29 It is a privilege to be asked to write the foreword for so excellent a book so timely and so much needed by the field Not only is it most unusual these days to have a single authored volume on so broad a topic but Dr La Rue has done a superb job of providing both a scholarly treatise and a practical handbook With a burgeoning elderly population and the corresponding increase in geriatric psychopathology the needs of mental health services are exceeding by far the supply of appropriate providers In an effort to meet this need psychiatry medicine neurology pharmacology psychology nursing and social work have all made the provision of training in geriatrics and gerontology a high priority but I fear we are losing the race For example multidisciplinary teams that assess diagnose and treat mental health disorders in elderly patients are incomplete without clinical psychologists and neuropsychologists and yet there is barely a handful of clinical psychologists trained in dealing with geriatric patients We can count on our fingers the additional ones graduated each year In hospitals clinics and private practices across the country otherwise skilled psychologists are unprepared to respond to the special mental health needs of the elderly A few CME programs are helping to address this need but they are clearly not enough

*Clinician's Guide To Neuropsychological Assessment* Rodney D. Vanderploeg, 2014-04-04

Neuropsychological assessment is a difficult and complicated process Often experienced clinicians as well as trainees and students gloss over fundamental problems or fail to consider potential sources of error Since formal test data on the surface appear unambiguous and objective they may fall into the habit of overemphasizing tests and their scores and underemphasizing all the factors that affect the validity reliability and interpretability of test data But interpretation is far from straightforward and a pragmatic application of assessment results requires attention to a multitude of issues This long awaited updated and greatly expanded second edition of the Clinician's Guide to Neuropsychological Assessment like the first focuses on the clinical practice of neuropsychology Orienting readers to the entire multitude of issues it guides them step by step through evaluation and helps them avoid common misconceptions mistakes and methodological pitfalls It is divided into three sections fundamental elements of the assessment process special issues settings and populations and new approaches and methodologies The authors all of whom are actively engaged in the clinical practice of neuropsychological assessment as well as in teaching and research do an outstanding job of integrating the academic and the practical The Clinician's Guide to Neuropsychological Assessment Second Edition will be welcomed as a text for graduate courses but also as an invaluable hands on handbook for interns postdoctoral fellows and experienced neuropsychologists alike No other book offers its combination of breadth across batteries and approaches depth and practicality

Practitioner's Guide to Evaluating Change with Neuropsychological Assessment Instruments Robert J. McCaffrey, Kevin Duff, Holly James Westervelt, 2013-11-11 The impetus for this volume began with our research in the 1980's involving serial neuropsychological evaluation with various patient populations At that time reports on the practice effects associated with routinely utilized clinical neuropsychological instruments were sparse While test retest data were available for almost all assessment instruments this was usually in the form of correlation coefficients and not changes in mean performance between or across assessment periods see McCaffrey Westervelt 1995 for a detailed discussion of these and related issues Clinical neuropsychological practitioners had few guidelines to assist them in determining if a change in a patient's performance across assessments was due to an intervention maturation practice effects or a combination of factors This volume represents our efforts at reviewing the literature between 1970 and 1998 and extracting the reported information on practice effects The tables include the assessment instrument used information on the subject patient groups the sample size n gender age intervention interval between the assessments scores at both assessment points and the citation Those studies that reported data on more than two assessment points are indicated by a notation however any data beyond the second

assessment are not reported and the interested reader should refer to the original article The tables are arranged alphabetically for the most widely used assessment instruments Those instruments for which there was limited data on practice effects are grouped by domain e g

**Reliability and Validity in Neuropsychological Assessment** Michael D. Franzen, 2013-11-21 No other book reviews clinical neuropsychological assessment from an empirical psychometric perspective In this completely revised and updated 2nd edition the concepts and methods of psychometric neuropsychology are presented as a framework by which to evaluate current instruments Newer methodologies and statistical techniques are discussed such as meta analysis effect size confirming factor analysis and ecological validity The explosion of research in this area since the publication of the first edition in 1989 has been incorporated including a greatly expanded chapter on child assessment instruments This volume is a must for the bookshelf of every clinical neuropsychologist as well as researchers and students Anyone conducting forensic evaluations will especially find useful the information on reliability and validity when preparing for court appearances

**Differential Diagnosis in Adult Neuropsychological Assessment** Joseph H. Ricker, PhD, ANPP, CN, RP, 2003-12-23 This text clearly presents a multitude of variables that potentially affect the results of neuropsychological tests The chapter authors all noted experts in their respective fields begin with a general discussion of neuropsychological constructs known to impact performance on neuropsychological tests including demographics personality and sociocultural factors They then present an empirical approach to assessment They focus on the disorders under discussion not solely the tests that might be used in diagnosis and reflect the contributions the field has made to detecting differences in disorders that have neurological underpinnings The disorders reviewed include dementia HIV related syndromes adult seizure disorders toxic exposure mild to severe brain injury and chronic fatigue syndrome
