**Modern Morphometrics in Physical Anthropology** Dennis E. Slice, 2006-06-01 Morphometrics has undergone a revolutionary transformation in the past two decades as new methods have been developed to address shortcomings in the traditional multivariate analysis of linear distances angles and indices While there is much active research in the field the new approaches to shape analysis are already making significant and ever increasing contributions to biological research including physical anthropology Modern Morphometrics in Physical Anthropology highlights the basic machinery of the most important methods while introducing novel extensions to these methods and illustrating how they provide enhanced results compared to more traditional approaches Modern Morphometrics in Physical Anthropology provides a comprehensive sampling of the applications of modern sophisticated methods of shape analysis in anthropology and serves as a starting point for the exploration of these practices by students and researchers who might otherwise lack the local expertise or training to get started This text is an important resource for the general morphometric community that includes ecologists evolutionary biologists systematists and medical researchers **Modules in modern physical anthropology ,**
