The Thymus Eberhard Walter, Eberhard Willich, W. Richard Webb, 2012-12-06 Until the middle of the present century the morphology and function of the thymus were primarily of interest to those working in the fields of pathologic anatomy endocrinology and pediatrics However during recent decades careful and refined histologic studies of the organ have expanded our knowledge It now seems certain that the thymus plays a central role in the immune system and some of the substances produced by this organ are considered together under the collective term of thymic hormones In clinical medicine in particular endocrinology and pediatrics as well as surgery and radiologic oncology the startling advances that have taken place in radiologic diagnostics with the advent of new imaging procedures such as computed tomography and magnetic resonance imaging have provided fresh impetus in the search for effective treatments for hyperplasia tumors and tumor like changes of the thymus Normal variants of the thymus which lies concealed within the anterior superior mediastinum have been recorded and pathologic changes such as primary or secondary tumors can now be analyzed and correctly diagnosed

*Modulation of MHC Antigen Expression and Disease* G. Eric Blair, Craig R. Pringle, D. John Maudsley, 1995-11-09 The major histocompatibility complex MHC genes are involved in the immune system's response to tumor and infected cells and in generating an immune response This book brings together basic aspects of the regulation of MHC antigens with important clinical applications in viral infection viral oncology cancer biology and autoimmunity There is a strong emphasis on situations where MHC expression is modulated either stimulated or repressed The book's major themes are the mechanisms of MHC expression explored at several levels including the transcription and translation of MHC genes and the insertion of MHC protein molecules into plasma membranes the effect of cytokines on MHC expression both in the etiology of certain diseases and in possible immunotherapeutic approaches to disease and the use of gene therapy to modify MHC expression in cancer cells and thereby cause tumor rejection This book will be valuable to researchers and clinicians in molecular biology immunology oncology and virology
