Doubled haploid technology in maize breeding: theory and practice, Next-Generation Plant Breeding Approaches for Stress Resilience in Cereal Crops Mallana Gowdra Mallikarjuna, S. Chandra Nayaka, Tanushri Kaul, 2022-09-15. This edited book highlights the gravity and efficacy of next generation breeding tools for the enhancement of stress resilience in cereals especially in the context of climate change, pests, diseases and abiotic stresses. The content of the book helps in understanding the application of emerging genetic concepts and neoteric genomic approaches in cereal breeding. It collates all the latest information about enhancing the stress resilience in cereal crops for overcoming food security issues. Cereals have predominantly been used as a staple food since time immemorial and contribute more than 50% of the caloric requirement of the global population. However, in cereals, the yield losses due to various stresses are very high considering the crop growth stage and stress sensitivity. Therefore, to feed and nourish the generations in the era of climate change, it is imperative to develop stress resilient cereal cultivars. This book explores newly developed next generation breeding tools viz genome wide association studies, genomic prediction, genome editing and accelerated generation advancement methodologies which revealed promising outcomes by enhancing the stress resilience in cereals with yield potential. This book is useful for postgraduate students specializing in plant breeding, plant stress physiology, plant genomics, agriculture and agronomy. It is of immense value to scientific community involved in teaching, research and extension activities related to cereal cultivation.

Liquid

Transportation Fuels from Coal and Biomass National Research Council, National Academy of Engineering, National Academy of Sciences, America's Energy Future Panel on Alternative Liquid Transportation Fuels, 2010-01-24 The transportation sector cannot continue on its current path. The volatility of oil prices threatens the U.S. economy; the large proportion of oil importation threatens U.S. energy security; and the massive contribution of greenhouse gases threatens the environment. The development of domestic sources of alternative transportation fuels with lower greenhouse emissions is now a national imperative. Coal and biomass are in abundant supply in the United States and can be converted to liquid fuels that can be combusted in existing and future vehicles. Their abundant supply makes them attractive candidates to provide non-oil based liquid fuels to the U.S. transportation system. However, there are important questions about the economic viability, carbon impact, and technology status of these options. *Liquid Transportation Fuels from Coal and Biomass* provides a snapshot of the potential costs of liquid fuels from biomass by biochemical conversion and from biomass and coal by thermochemical conversion. Policy makers, investors, leaders in industry, the transportation sector, and others with a concern for the environment, economy, and energy security will look to this book as a roadmap to independence from foreign oil. With immediate action and sustained effort, alternative liquid fuels can be available in the 2020 time frame if or when the nation needs them.

Thidiazuron: From Urea Derivative to Plant Growth Regulator Naseem Ahmad, Mohammad Faisal, 2018-03-23 Plant biotechnology is a most interesting branch for academicians and researchers in recent past. Now days it becomes a very useful tool in agriculture and medicine and is regarded as a popular area of research especially in biological sciences because it makes an integral use of biochemistry, molecular biology, and engineering sciences in order to achieve technological application of cultured tissues, cell, and microbes. Plant tissue culture (PTC) refers to a technique of cultivation of plant cells and other parts on artificial nutrient medium in controlled environment under aseptic conditions. PTC requires various nutrients, pH, carbon source, gelling agent, temperature, photoperiod, humidity, etc. and most importantly the judicious use of plant growth regulators. Various natural adenine and phenyl urea derivatives are employed for the induction and proliferation of different types of explants. Several phenyl urea derivatives were evaluated and it was observed that thidiazuron (N-phenyl-1,2,3-thiadiazol-5-ylurea) was found to be the most active among the plant growth regulators. Thidiazuron (TDZ) was initially developed as a cotton defoliant and showed high cytokinin-like activity. In some examples its activity was 100 times more than BA in tobacco callus assay and produces more number of shoots in cultures than Zeatin and 2iP. TDZ also showed major breakthrough in tissue culture of various recalcitrant legumes and woody species. For the last two decades number of laboratories has been working on TDZ with different aspect and number of publications has come out. To the best of our knowledge there is no comprehensive edited volume on this particular topic. Hence the edited volume is a deed to consolidate the scattered information on role of TDZ in plant tissue culture and genetic manipulations that would hopefully prove informative to various researches. *Thidiazuron: From Urea Derivative to Plant Growth Regulator* compiles

various aspects of TDZ in Plant Tissue Culture with profitable implications The book will provides basic material for academicians and researchers who want to initiate work in this fascinating area of research The book will contain 26 chapters compiled by International dignitaries and thus giving a holistic view to the edited volume
