compared to experimental data obtained using femtosecond spectroscopy and x ray scattering The level of agreement between theory and experiment is impressive and provides both a convincing validation of the method and significant new insights into the chemical dynamics and molecular determinants of the experimental data Hence the method presented in the thesis has the potential to become a very important contribution to the rapidly growing field of femtosecond x ray science a trend reflected in the several free electron x ray lasers XFELs currently being built around the world Light induced chemical processes are accompanied by molecular motion of electrons and nuclei on the femtosecond time scale Uncovering these dynamics is central to our understanding of the chemical reaction on a fundamental level Asmus O Dohn has implemented a highly efficient QM MM Direct Dynamics method for predicting the solvation dynamics of transition metal complexes in solution
