Harold C. Hodge, J.N. Stannard, J.B. Hursh, 2013-06-29 More than a year ago the three editors sat down at a table and worked out a set of six chapter headings which they believed might serve in turn for each of the three sections of this handbook The reader will note a similarity in order of presentation and in emphasis However as our editorial plans progressed it became apparent that for each element and for the element group there were one or two special topics appropriate for that section alone Accordingly in the section on uranium the common pattern holds for Chaps 1 through 6 which include an introduction Chap 1 a discussion of the physical and chemical properties Chap 2 experimental data on animals Chap 3 experimental data on man Chap 4 the rationale and development of air concentration limits to control industrial worker exposure Chap 5 and the practical problems of applying such limits in the uranium industry Chap 6 Chap 7 entitled Uranium Mining Hazards is the subject category which is special for uranium the chapter brings up to date the account of an important occupational hazard which was first noted by GEORGIUS AGRICOLA 1490 1555 *Summaries of the USAEC Basic Research Program in Chemistry*, 1968 **Journal of the American Chemical Society** American Chemical Society, 1921 Proceedings of the Society are included in v 1 59 1879 1937 *Introduction to Green Chemistry* John Andraos, Albert S. Matlack, 2022-03-10 Interest in green chemistry and clean processes has grown so much in recent years that topics such as fluorous biphasic catalysis metal organic frameworks and process intensification which were barely mentioned in the First Edition have become major areas of research In addition government funding has ramped up the development of fuel cells and biofuels This reflects the evolving focus from pollution remediation to pollution prevention Copiously illustrated with more than 800 figures the Third Edition provides an update from the frontiers of the field It features supplementary exercises at the end of each chapter relevant to the chemical examples introduced in each chapter Particular attention is paid to a new concluding chapter on the use of green metrics as an objective tool to demonstrate proof of synthesis plan efficiency and to identify where further improvements can be made through fully worked examples relevant to the chemical industry NEW AND EXPANDED RESEARCH TOPICS Metal organic frameworks Metrics Solid acids for alkylation of isobutene by butanes Carbon molecular sieves Mixed micro and mesoporous solids Organocatalysis Process intensification and gas phase enzymatic reactions Hydrogen storage for fuel cells Reactive distillation Catalysts in action on an atomic scale UPDATED AND EXPANDED CURRENT EVENTS TOPICS Industry resistance to inherently safer chemistry Nuclear power Removal of mercury from vaccines Removal of mercury and lead from primary explosives Biofuels Uses for surplus glycerol New hard materials to reduce wear Electronic waste Smart growth The book covers traditional green chemistry topics including catalysis benign solvents and alternative feedstocks It also discusses relevant but less frequently covered topics with chapters such as Chemistry of Long Wear and Population and the Environment This coverage highlights the importance of chemistry to everyday life and demonstrates the benefits the expanded exploitation of green chemistry can
