*Information Systems Reengineering, Integration and Normalization* Joseph S. P. Fong,Kenneth Wong Ting Yan,2022-01-01 Database technology is an important subject in Computer Science Every large company and nation needs a database to store information The technology has evolved from file systems in the 60 s to Hierarchical and Network databases in the 70 s to relational databases in the 80 s object oriented databases in the 90 s and to XML documents and NoSQL today As a result there is a need to reengineer and update old databases into new databases This book presents solutions for this task In this fourth edition Chapter 9 Heterogeneous Database Connectivity HDBC offers a database gateway platform for companies to communicate with each other not only with their data but also via their database The ability of sharing a database can contribute to the applications of Big Data and surveys for decision support systems The HDBC gateway solution collects input from the database transfers the data into its middleware storage converts it into a common data format such as XML documents and then distributes them to the users HDBC transforms the common data into the target database to meet the user s requirements acting like a voltage transformer hub The voltage transformer converts the voltage to a voltage required by the users Similarly HDBC transforms the database to the target database required by the users This book covers reengineering for data conversion integration for combining databases and merging databases and expert system rules normalization for eliminating duplicate data from the database and above all HDBC connects all legacy databases to one target database for the users The authors provide a forum for readers to ask questions and the answers are

Database Reengineering and Interoperability T.Y. Cheung, J. Fong, B. Siu, 2012-12-06 Modern computing management systems and application programs are often designed as open systems In an open environment the users application programs serving similar purposes though possibly implemented using different hardware or software technologies can interact easily and properly with one other But it is a big challenge in research and development to provide the means for integrating these technologies and reengineering the new or existing management systems so as to make all of the relevant components interoperable In case of databases because of the variety in data models and theory the interoperability and reengineering issues become even more complex and crucial especially for companies heavily involved in data management With the rapid advances in networking and database modeling technology old issues may have to be reinvestigated and new issues come up constantly It is our hope that this year's workshop the sixth in a series of annual events can provide a timely forum for database researchers and practitioners to share their recent experience and results in various aspects of this fast developing field This series of workshops has been organized by the Hong Kong Computer Society and financially supported by many local industrial and business companies This year the Cooperative Research Centre for Open Systems Technology located in the Department of Computer Science City University of Hong Kong has joined the organization team and the list of financial sponsors
