Network Economics of Marine Ecosystems and their Exploitation Christian Mullan, 2013-10-23 This book addresses the question of the double exposure of marine ecosystems i e to both global climate changes and economic globalization This book contains a short but self sufficient mathematical introduction the formalization in the context of Network economics of global commodity chains with both trophic and economic processes and a series of cases studies going from the re addressing of fundamental ecological questions such as Gause s exclusion principles to practical studies such as the representation of the global supply chain for tuna

Competing on Supply Chain Quality Anna Nagurny, Dong Li, 2016-05-30 This book lays the foundations for quality modeling and analysis in the context of supply chains through a synthesis of the economics operations management as well as operations research management science literature on quality The reality of today s supply chain networks given their global reach from sourcing locations to points of demand is further challenged by such issues as the growth in outsourcing as well as the information asymmetry associated with what producers know about the quality of their products and what consumers know Although much of the related literature has focused on the micro aspects of supply chain networks considering two or three decision makers it is essential to capture the scale of supply chain networks in a holistic manner that occurs in practice in order to be able to evaluate and analyze the competition and the impacts on supply chain quality in a quantifiable manner This volume provides an overview of the fundamental methodologies utilized in this book including optimization theory game theory variational inequality theory and projected dynamical systems theory It then focuses on major issues in today s supply chains with respect to quality beginning with information asymmetry followed by product differentiation and branding the outsourcing of production from components to final products to quality in freight service provision The book is filled with numerous real life examples in order to emphasize the generality and pragmatism of the models and tools The novelty of the framework lies in a network economics perspective through which the authors identify the underlying network structure of the various supply chains coupled with the behavior of the decision makers ranging from suppliers and manufacturers to freight service providers What is meant by quality is rigorously defined and quantified The authors explore the underlying dynamics associated with the competitive processes along with the equilibrium solutions As appropriate the supply chain decision makers compete in terms of quantity and quality or in price and quality The relevance of the various models that are developed to specific industrial sectors including pharmaceuticals and high technology products is clearly made Qualitative analyses are provided along with effective and easy to implement computational

procedures Finally the impacts of policy interventions in the form of minimum quality standards and their ramifications in terms of product prices quality levels as well as profits are explored The book is filled with many network figures graphs and tables with data

Coviability of Social and Ecological Systems: Reconnecting Mankind to the Biosphere in an Era of Global Change Olivier Barrière, Mohamed Behnassi, Gilbert David, Vincent Douzal, Mireille Fargette, Thérèse Libourel, Maud Loireau, Laurence Pascal, Catherine Prost, Voyner Ravena-Cañete, Frédérique Seyler, Serge Morand, 2019-03-12 This book considers the principle of sustainable development which is currently facing a growing environmental crisis A new mode of thinking and positioning the ecological imperative is the major input of this volume The prism of co viability is not the economics of political agencies that carry the ideology of the dominant conventional economic schools but rather an opening of innovation perspectives through science This volume through its four parts more than 40 chapters and a hundred authors gives birth to a paradigm which crystallizes within a concept that will support in overcoming the ecological emergency deadlock

The Blue Economy Handbook of the Indian Ocean Region Attri, V.N.,Bohler-Mulleris, Narnia,2018-08-03 As humanity enters the Anthropocene epoch the oceans are more at risk than ever before as a result of the increased exploitation of its resources The Indian Ocean is the third largest ocean in the world comprising 20% of the water on the Earth s surface The sea lanes in the Indian Ocean are among the busiest in the world with more than 80 percent of global seaborne trade in oil transiting through the Indian Ocean and its vital chokepoints and an estimated 40% of the world s offshore oil production comes from the Indian Ocean The importance of this region cannot be underestimated and there is no doubt that there are many opportunities for economic growth and job creation presented by the waters washing the shores of the Indian Ocean Rim In order to ensure a desirable future for humanity it is necessary to make use of the ocean s resources in a sustainable and responsible manner Climate change is affecting the Indian Ocean negatively placing a strain on the ability to ensure food security and damaging the economies of small island states that depend on fisheries and aquaculture for their livelihoods Increasing ocean temperatures and ocean acidification are taking a toll on ecosystems This book is the first of its kind providing fresh insights into the various aspects and impacts of the Blue Economy in the Indian Ocean Region from shifting paradigms to an accounting framework gender dynamics the law of the sea and renewable energy this handbook aims at increasing awareness of the Blue Economy in the Indian Ocean Region and to provide evidence to policy makers in the region to make informed decisions The contributions are from a mixture of disciplines by scholars and experts from seven countries

Blue Economy and Ocean Sustainable Development in a Globalised World: Social, Political, Economic and Environmental Issues Ibukun J. Adewumi,Andrei Polejack,Joanna Vince,Maree E. Fudge,2023-12-05 In the last decade the concept of a Blue Economy has ignited a deep theoretical debate Ranging from the integration of the triple bottom line of sustainability to the optimization of profit from ocean exploitation the meaning of the term blue economy differs considerably between epistemic communities and even more so among national and regional policies There is a general sense of the opportunity to realise enhanced social and economic benefits from the sustainable utilisation of their ocean and coastal

resources under the umbrella framework of blue economy Blue economy is gaining traction already as a significant component of national policies even in spite of a clear conceptualization of the term Many countries are now preparing national policies towards realising their blue economy ambitions utilizing the concept as they see fit Likewise multilateral and regional organisations are developing guidelines and providing investment in new research technologies and financing tools that promote blue economy Critical challenges abound in particular in less privileged countries These include the gap in research capabilities governments prioritizing social wellbeing and economic profit in contrast to environmental protection the identification of new and emerging areas of ocean economic activity that are both socially and ecologically sustainable and holds viable business models that can attract private investment

Early European Agriculture British Academy. Major Research Project in the Early History of Agriculture, 1982-10-28 First printed in 1982 this is the third and final volume to be published as a result of the British Academy Major Research Project on the Early History of Agriculture carried out in the Department of Archaeology in Cambridge under the direction of the late Eric Higgs After his death in 1976 the Project was drawn to its conclusion by his associates and this book is effectively a summary of the results of the Project The first two volumes Papers in Economic Prehistory and Palaeoeconomy argued that the development of agriculture was a much more gradual and widespread phenomenon than had been thought previously This book now discusses the origins and early development of prehistoric agriculture within the framework of prehistoric subsistence economies in general Early human economies are viewed in their adaptation to three crucial resource zones the uplands the lowlands and the littorals

Colonial Trade Networks Orin Brightfield, AI, 2025-05-05 Colonial Trade Networks explores how the colonial era s global commerce shaped today s international economics and political structures It examines the mechanics of colonial trade routes highlighting the long term socioeconomic impacts on both colonizers and colonized populations The book argues that these trade routes were powerful instruments that fundamentally reshaped global power dynamics leading to enduring economic disparities and social inequalities For example the insatiable European desire for spices and precious metals fueled the establishment of trade networks like the transatlantic slave trade and the spice routes which had devastating consequences for local populations The book progresses by first introducing key concepts such as triangular trade and chartered companies It then develops these ideas through case studies of specific trade routes analyzing the commodities traded and the actors involved Finally it examines the long term consequences focusing on resource dependence and the creation of global supply chains By drawing upon historical shipping records colonial administrative documents and economic data Colonial Trade Networks provides empirical support for its arguments offering a critical perspective on the roots of global trade imbalances and the legacy of mercantilism and resource extraction

Marine Ecosystem Assessment for the Southern Ocean: Meeting the Challenge for Conserving Earth Ecosystems in the Long Term Monica M. C. Muelbert, 2024-12-24 National and international agencies need assessments of change in ecosystems and their drivers in order to sustain natural systems to maintain the delivery of services and to meet the challenge for conserving Earth ecosystems in the long term In marine systems change may arise directly from human activities e g fisheries indirectly from local or global activities cascading effects through food webs from fisheries or changing environments from climate change and or ocean acidification or from naturally varying processes A particular challenge for managers is to identify how dangerous future climate change will be for ecosystems and their services and whether mitigation or adaptation may be needed in advance in order to achieve the conservation requirements For regions of international attention particularly those that have the attention of many management or policy oriented bodies a standardized process is needed to harmonize the scientific information on the status and trends in ecosystems used by the different bodies That process also needs to ensure the information is available in a timely manner For example assessments of change in habitats species and or food webs in the Southern Ocean are currently compiled separately for at least ten different international organizations or processes A

Marine Ecosystem Assessment for the Southern Ocean MEASO aims to harmonize that information for policy makers This assessment began with an international conference in April 2018 <http://www.measo2018.aq> where it was agreed to undertake the first MEASO over 2018-2019 with the view to provide the outcomes to relevant bodies such as the Scientific Committee for the Conservation of Antarctic Marine Living Resources soon after **Oceanobs'19: An Ocean of Opportunity.**
