Networking Services Qos Signaling Processes:

Networking Services Harry Perros, 2014-02-13 *Networking Services QoS Signaling Processes* Harry Perros The book has been structured around the Next Generation Network NGN framework which separates the transport network services and signaling protocols into the service stratum and the transport stratum The service stratum is the control plane for the establishment of networking sessions and the transport stratum is the data plane over which the data of a networking service is transported Within this context the author explains in detail the signaling protocols used in the service stratum for setting up networking services and the Quality of Service QoS architectures used in the transport network to guarantee QoS *Networking Services* Provides a systematic coverage of the signaling and QoS architectures for networking services Explains topics such as SIP IMS MPLS DiffServ LDP RSVP TE congestion control RACF and VPNs Describes IMS based architectures for popular networking services such as VoIP presence instant messaging video conferencing multimedia telephony IPTV and service and device continuity Describes queueing theory and simulation techniques used to dimension the capacity of a networking service Illustrates the material with problems and projects *Networking Service* is a textbook for graduate and senior undergraduate students in computer science and computer engineering and also a reference book for networking engineers

Bandwidth Allocation for Video under Quality of Service Constraints Bushra Anjum, Harry G. Perros, 2015-01-20 We present queueing based algorithms to calculate the bandwidth required for a video stream so that the three main Quality of Service constraints i.e. end to end delay jitter and packet loss are ensured Conversational and streaming video based applications are becoming a major part of the everyday Internet usage The quality of these applications QoS as experienced by the user depends on three main metrics of the underlying network namely end to end delay jitter and packet loss These metrics are in turn directly related to the capacity of the links that the video traffic traverses from its source to destination The main problem that this book addresses is how much bandwidth we should allocate on the path from source to destination of a video traffic flow such that the end to end delay jitter and packet loss of the video packets are within some expected required bounds
