Neufert Architects Data Third Edition:

Architects' Data Ernst Neufert, Peter Neufert, 2012-03-26 Neufert's Architects Data is an essential reference for the initial design and planning of a building project. It provides in one concise volume the core information needed to form the framework for the more detailed design and planning of any building project. Organised largely by building type, it covers the full range of preliminary considerations and with over 6200 diagrams, it provides a mass of data on spatial requirements. Most illustrations are dimensioned and each building type includes plans, sections, site layouts and design details. An extensive bibliography and a detailed set of metric/imperial conversion tables are included. Since it was first published in Germany in 1936, Ernst Neufert's handbook has been progressively revised and updated through 39 editions and many translations. This fourth English language edition is translated from the 39th German edition and represents a major new edition for an international English speaking readership. Reviews of the Previous Edition: Neufert's Architects Data was the first book I bought when I started my studies in architecture. It was invaluable for me then and it is still a useful aid in my designs. Cesar Pelli. With this thorough rewrite, Neufert has produced yet again an invaluable reference book. The Architects Journal. **The Architects' Journal**, 2002. **Inclusive Design** Rob Imrie, Peter Hall, 2003-09-02 The reality of the built environment for disabled people is one of social, physical and attitudinal barriers which prevent their ease of mobility, movement and access. In the United Kingdom, most homes cannot be accessed by wheelchair while accessible transport is the exception rather than the rule. Pavements are littered with street furniture while most public and commercial buildings provide few design features to permit disabled people ease of access. Inclusive Design is a documentation of the attitudes, values and practices of property professionals including developers, surveyors and architects in responding to the building needs of disabled people. It looks at the way in which pressure for accessible building design is influencing the policies and practices of property companies and professionals, with a primary focus on commercial developments in the UK. The book also provides comments on and references to other countries, particularly Sweden, New Zealand and the USA. Dynamics of Industrial Revolution 4.0: Digital Technology Transformation and Cultural Evolution Ratri Wulandari, Idhar Resmadi, Vika Haristianti, Rahmiati Aulia, Riky Taufik Afif, Gema Ari Prahara, Aulia Ibrahim Yeru, 2021-08-25 The 7th Bandung Creative Movement conference presented the theme Dynamics of Industrial Revolution 4.0 which discussed how the digital world and connectivity changed human culture in various aspects of life and transformed in accordance to human needs and social culture. Digital technology has transformed society to serve people from manufacturing needs to smart cities from network connectivity to people connectivity. The application of information technology has helped in improving live quality and environmental sustainability. Digital transformation is revolutionizing how businesses and workers interconnect to be more productive and efficient. The result is improved collaboration, faster processes and time to market, lower costs and better products. Devices are getting smarter meaning they are able to perform more and more tasks without human intervention. Moreover, these devices generate

data that provide insights to further improve processes and gain greater efficiencies Moreover with the Internet of Things IoT all these smart devices are interconnected in ways that not only help make them even smarter but also enhances the intelligence of the overall system Digital technology is a formidable driver for the transformation of a highly carbon dependent world into one that is more ecologically smart We are entering a new era of environmental innovation that is driving better alignment between technology and environmental goals Since its first announcement in 2011 industrial revolution 4.0 has dynamically changed and transformed to adjust itself to the human needs and to serve more efficiency and effectiveness of everyday life as well as environmental enhancement The 7th Bandung Creative Movement has brought forward discussions on dynamic changes ups and downs innovations relations of industrial revolution of the internet of thing data automation to human physical world new art and aesthetic business product innovation built environment and education

An Architecture of Parts: Architects, Building Workers and Industrialisation in Britain 1940 - 1970 Christine Wall, 2013-07-04 This book is unique in describing the history of post war reconstruction from an entirely new perspective by focusing on the changing relationship between architects and building workers It considers individual as well as collective interactions with technical change and in doing so brings together for the first time an extraordinary range of sources including technical archives oral history and visual material to describe the construction process both during and in the decades after the war It focuses on the social aspects of production and the changes in working life for architects and building workers with increasing industrialization in particular analysing the effect on the building process of introducing dimensionally coordinated components Both architects and building workers have been accused of creating a built environment now popularly discredited architects responsible for poor design and building workers for poor workmanship

However many of the structures and ideas underpinning this period of rapid change were revolutionary in their commitment to a complete transformation of the building process An Architecture of Parts adds to the growing literature on changes in the building world during and immediately after the Second World War It is significant both empirically and historically in its examination of the ideas technology and relationships that fired industrialization of the building process in mid century Britain

Building Access Aimi Hamraie,2017-11-01 All too often wrote disabled architect Ronald Mace designers don't take the needs of disabled and elderly people into account Building Access investigates twentieth century strategies for designing the world with disability in mind Commonly understood in terms of curb cuts automatic doors Braille signs and flexible kitchens Universal Design purported to create a built environment for everyone not only the average citizen But who counts as everyone Aimi Hamraie asks and how can designers know Blending technoscience studies and design history with critical disability race and feminist theories Building Access interrogates the historical cultural and theoretical contexts for these questions offering a groundbreaking critical history of Universal Design Hamraie reveals that the twentieth century shift from design for the average to design for all took place through liberal political economic and scientific structures concerned with defining the disabled user and designing in its name Tracing the co evolution of accessible design for disabled veterans a radical disability maker movement disability rights law and strategies for diversifying the architecture profession Hamraie shows that Universal Design was not just an approach to creating new products or spaces but also a sustained understated activist movement challenging dominant understandings of disability in architecture medicine and society Illustrated with a wealth of rare archival materials Building Access brings together scientific social and political histories in what is not only the pioneering critical account of Universal Design but also a deep engagement with the politics of knowing making and belonging in twentieth century United States
