 Lichuan Wu, Jinbao Song, Victor Alari, Leonie Esters, 2024-12-24 Air sea interactions control the exchange of mass momentum  
 and heat between the atmosphere and the ocean Substantially they significantly affect the development of atmospheric and  
 oceanic systems from submesoscale to global scales Oceanic extremes i e cyclones storms freak waves polar lows storm  
 surge etc pose a significant hazard to offshore activities and coastal society Air sea interaction processes are complex and  
 play a central role in the development of those oceanic extremes Improved understanding of the air sea interaction processes  
 and describing them in weather models and Earth System Models can improve their prediction and mitigate the potential  
 damages The energy distribution affected by air sea interactions can change the large scale circulation and alter the  
 climatology of the oceanic extremes Despite an overall improvement in the understanding of air sea interactions there are  
 still many knowledge gaps particularly under extreme conditions **Detection of Melt Ponds on Arctic Sea Ice with  
 Optical Satellite Data** Anja Rösel, 2013-05-23 The Arctic sea ice is characterized by profound changes caused by surface  
 melting processes and the formation of melt ponds in summer Melt ponds contribute to the ice albedo feedback as they  
 reduce the surface albedo of sea ice and hence accelerate the decay of Arctic sea ice To quantify the melting of the entire  
 Arctic sea ice satellite based observations are necessary Due to different spectral properties of snow ice and water  
 theoretically multi spectral optical sensors are necessary for the analysis of these distinct surface types This study  
 demonstrates the potential of optical sensors to detect melt ponds on Arctic sea ice For the first time an Arctic wide multi  
 annual melt pond data set for the years 2000 2011 has been created and analyzed *Intelligent Systems* André
