Neurobiology Of Infant Vision Advances In Infancy Research:

Neurobiology of Infant Vision Brian Hopkins, Scott P. Johnson, 2003-06-30 The study of visual development has proceeded at a rapid pace in recent years and there have been theoretical and methodological innovations across a wide range of disciplines This book brings together some of the most recent innovations from a neurobiological perspective Chapters cover the pre to postnatal development of vision new insights into the concept of critical periods object and face recognition as well as dynamic perception and visual recognition memory in infants The volume finishes with a detailed overview of the development of visual functions from the perspective of neural network modeling This book will appeal to psychologists visual scientists and infancy researchers with an interest in development of the visual system from a multidisciplinary perspective An integrative introduction is followed by chapters that challenge thinking about development in terms of a nativist empiricist dichotomy Emphasis is on cross disciplinary research links and between chapters readers will find cross references

Progress in Infancy Research Jeffrey W. Fagen, Harlene Hayne, 2002-03 This is the second volume in the series on Infancy Research which presents syntheses of theory on infants development both human and animal For researchers in developmental psychology neuroscience

Cognitive Neuroscience of Attention John E. Richards, 1998-04 This volume presents works by leading researchers in cognitive neuroscience on the neural bases of attention The lifespan perspective means the book will be of special interest to developmentalists but all neuroscientists will find it valuable

Progress in infancy Research Carolyn Rovee-Collier, Lewis P. Lipsitt, Harlene Hayne, 2000-02-01 The Progress in Infancy Research Series is dedicated to the presentation of innovative and exciting research on infants both human and animal Each volume in the series is designed to stand alone and contains autonomous chapters which are based on high quality programs of research with infants These chapters integrate the work of the authors with that of other experts working in the same or related areas The authors wish to present high quality critical syntheses bearing on infant perception and sensation learning and memory processes and other aspects of development This series will be a forum for the presentation of technological breakthroughs methodological advances and new integrations that might create platforms for future programmatic work on the complexities of infant behavior and development Each volume in the series is dedicated to an outstanding investigator whose research has illuminated the nature of infant behavior and development and whose contributions to the field have been of seminal importance

Brain-mind Machinery Gee Wah Ng, 2009 Brain Mind Machinery provides a walkthrough to the world of brain inspired computing and mind related questions Bringing together diverse viewpoints and expertise from multidisciplinary communities the book explores the human quest to build a thinking machine with human like capabilities Readers will acquire a first hand understanding of the brain and mind mechanisms and machineries as well as how much we have progressed in and how far we are from building a truly general intelligent system like the human brain

The Development Of Sensory, Motor And Cognitive Capacities In Early Infancy George

Butterworth, Francesca Simion, 2013-06-20 Research on the development of human infants has revealed remarkable capacities in recent years. Instead of stressing the limitations of the newborn, the modern approach is now more optimistically based on an assessment of the adaptive capabilities of the infant. Innate endowment coupled with interaction with the physical and social environment enables a developmental transition from processes deeply rooted in early perception and action to the cognitive and language abilities typical of the toddler. This book reviews a number of issues in early human development. It includes a reconceptualization of the role of perception at the origins of development, a reconciliation of psychophysical and ecological approaches to early face perception, and building bridges between biological and psychological aspects of development in terms of brain structure and function. Topics covered include basic exploratory processes of early visual systems in early perception and action, face perception in newborns, species-typical aspects of human communication, imitation, perception of the phonetic structure of speech, origins of the pointing gesture, handedness, origins and development, theoretical contributions on perception and cognition, implicit and explicit knowledge in babies, sensory motor coordination and cognition, information processing and cognition, perception, habituation, and the development of intelligence from infancy.

Regression Periods in Human Infancy Mikael Heimann, Frans X. Plooij, 2003-10-17 Regression periods play a central role in the psychological development of the human baby. Studies of infants have identified 10 periods of regression or a return to a high frequency of mother-infant contact within the first 20 months of life. These periods of emotional insecurity in the child signal forthcoming periods of developmental advance and the emergence of an array of new skills as a consequence of parent-infant conflict over body contact and the renegotiation of old privileges. Although the basic idea in this book is an old one, the authors believe that regression periods deserve further study and have identified four questions of central importance today: Can the phenomenon of regression periods as found by Dutch researchers in 1992 be replicated in other countries and cultures? What environmental conditions have an effect on these regression periods, and how? Are there physical conditions in infants that show a non-linear distribution over age similar to regression periods? Have brain changes been detected since the review of Fischer and Rose (1994) at other ages than the six reported by them, and if yes, how do these relate to the ages at which regression periods are found? Forming the core of this book, the replication studies performed in Sweden, Spain, and England provide support that regression periods are a reliable phenomenon and should be dealt with accordingly whenever developmental processes in infancy are discussed.

Neural Circuit Development and Function in the Healthy and Diseased Brain, 2013-05-06 The genetic, molecular, and cellular mechanisms of neural development are essential for understanding evolution and disorders of neural systems. Recent advances in genetic, molecular, and cell biological methods have generated a massive increase in new information, but there is a paucity of comprehensive and up-to-date syntheses, references, and historical perspectives on this important subject. The Comprehensive Developmental Neuroscience series is designed to fill this gap, offering the most thorough coverage of this field on the market today and addressing all aspects of how the nervous

system and its components develop Particular attention is paid to the effects of abnormal development and on new psychiatric neurological treatments being developed based on our increased understanding of developmental mechanisms Each volume in the series consists of review style articles that average 15 20pp and feature numerous illustrations and full references Volume 3 offers 40 high level articles devoted mainly to anatomical and functional development of neural circuits and neural systems as well as those that address neurodevelopmental disorders in humans and experimental organisms Series offers 144 articles for 2904 full color pages addressing ways in which the nervous system and its components develop Features leading experts in various subfields as Section Editors and article Authors All articles peer reviewed by Section Editors to ensure accuracy thoroughness and scholarship Volume 3 sections include coverage of mechanisms that control the assembly of neural circuits in specific regions of the nervous system multiple aspects of cognitive development and disorders of the nervous system arising through defects in neural development **Management of Visual Impairment in**

Childhood Alistair Fielder,Anthony Best,Martin C. O. Bax,1993-11-18 Management of visual impairment in childhood requires input from such a wide range of medical and nonmedical disciplines that the delivery of coordinated and appropriate care presents serious problems This book is a practical guide to the day to day management of children with this difficult problem Written in accessible language with a minimum of jargon it is intended for both a medical and nonmedical audience pediatricians ophthalmologists optometrists educators and social workers The authors cover a wide range of topics including the epidemiology of childhood blindness prevention visual assessment in early life the ophthalmic and neurological causes of visual impairment the effects of impairment on development behavior and the family community and ophthalmic management management of the multiply impaired child access to the educational curriculum and the challenge of technology

Developmental Cascades ,2023-04-19 Developmental Cascades Volume 64 in the Advances in Child Development and Behavior series brings together papers that share a focus on cascading influences across domains and developmental time The contributors are leading experts in the field of developmental science in areas such as perceptual development language development motor development social development cognitive development academic achievement media use and children at risk for anxiety and depression The papers highlight theoretical issues around processes that give rise to cascading effects of experiences in infancy early childhood and adolescence using a variety of methods and study designs Together the papers showcase the types of methods designs and analytic approaches that bring rigor to understanding cascades in development This volume provides a state of the art collection that will appeal to researchers clinicians educators policy makers and students across disciplines relevant to the science and practice of child learning and development Focus on developmental cascades World renowned across developmental domains and periods Coverage of state of the art methods and analytic approaches to investigate developmental cascades Neural Circuit and Cognitive Development Bin Chen,Kenneth Y. Kwan,2020-06-10 Neural Circuit and Cognitive Development Second Edition the latest release in the Comprehensive

Developmental Neuroscience series provides a much needed update to underscore the latest research in this rapidly evolving field with new section editors discussing the technological advances that are enabling the pursuit of new research on brain development This volume is devoted mainly to anatomical and functional development of neural circuits and neural systems and cognitive development Understanding the critical role these changes play in neurodevelopment provides the ability to explore and elucidate the underlying causes of neurodevelopmental disorders and their effect on cognition This series is designed to fill the knowledge gap offering the most thorough coverage of this field on the market today and addressing all aspects of how the nervous system and its components develop Features leading experts in various subfields as section editors and article authors Presents articles that have been peer reviewed to ensure accuracy thoroughness and scholarship Includes coverage of mechanisms that control the assembly of neural circuits in specific regions of the nervous system and multiple aspects of cognitive development

Building Object Categories in Developmental Time Lisa Gershkoff-Stowe, David H. Rakison, 2005-05-06 This book covers a broad range of current research topics in category development Its aim is to understand the perceptual and cognitive mechanisms that underlie category formation and how they change in developmental time The chapters in this book are

The Cognitive Neuroscience of Development Michelle de Haan, Mark H. Johnson, 2005-08-18 Provides an extensive overview of the methods used to study these questions and the emerging interface between neurobiological and psychological perspectives in the study of typical and atypical cognitive development

Advances in Infancy Research Carolyn Rovee-Collier, Lewis P. Lipsitt, Harlene Hayne, 1996-04-01 Twelve researchers from leading American universities present data of their studies and critically review it in contrast with other discoveries emphasizing non traditional and controversial approaches to the subject matter The discussions concentrate on infant food deprivation sucking movement

Infant EEG and Event-Related Potentials Michelle de Haan, 2013-04-15 Infancy is a time of rapid growth when brain plasticity is at a maximum Event related potentials ERPs are one of the few methods that can easily and safely be used to study this process and have led to exciting discoveries about human brain functioning and the neural basis of cognition Over recent years there has been a massive rise in the level of interest in ERPs and this book considers the advantages which they offer to researchers and clinicians In particular it looks at the benefits of this form of neuroimaging as a non invasive tool for detecting impairments in brain and cognitive development very early in life The potential use of ERPs for clinical settings is also explored in detail The contributions are all from eminent researchers in the field and represent the latest thought on the topic Infant EEG and Event Related Potentials explains the basics of event related potentials for those less familiar with the procedures and terminology as well as offering a valuable handbook of the latest theories and empirical findings for those working in the field This will be a valuable source for those interested in developmental psychology and neuropsychology and for clinicians interested in application of ERPs
