Counseling Problem Gamblers Joseph W. Ciarrocchi,2001-10-05 Over the past decade legal wagering has expanded rapidly in North America In 1998 alone people lost 50 billion dollars in legal betting and it is estimated that illegal wagering is twice that amount A recent government report based on the broadest population survey concludes that the lifetime and pathological gamblers in the U S range between 4 and 10 million persons and is growing If we include the families affected by problem gambling then the potential impact is indeed prodigious Virtually no community in the U S and Canada is left untouched by entertainment or problem gambling Treating problem gambling has evolved from a small group of practitioners in the 1980 s working in specialty inpatient units into an international enterprise that affects the caseload of many mental health professionals Owing to its quiet origins problem gambling treatment strategies are not well known throughout the clinical community Consequently the average clinician is him herself learning as they go This approach does not benefit either client or therapist As the book s first chapter makes clear problem gambling differs significantly from substance abuse its nearest clinical relative Not attending to these differences leads to poor results and clinical failure This book is the one essential tool needed by clinicians treating or likely to treat problem gambling Written by a clinician with wide experience it is intended for the general clinician treating or likely to treat problem gambling desiring a comprehensive yet user friendly guide Assessment and treatment of problem gambling and those affected by it is discussed Includes diagnostic instruments

developed by the author An integrative approach is taken with a special focus on cultural concerns and clinical applications for women and minorities Integration of spirituality in treatment is covered

Neuronal and Psychological Underpinnings of Pathological Gambling Bryan F Singer, Patrick Anselme, Mike James Ferrar Robinson, Paul Vezina, 2014-11-04 Like in the case of drugs gambling hijacks reward circuits in a brain which is not prepared to receive such intense stimulation Dopamine is normally released in response to reward and uncertainty in order to allow animals to stay alive in their environment where rewards are relatively unpredictable In this case behavior is regulated by environmental feedbacks leading animals to persevere or to give up In contrast drugs provide a direct intense pharmacological stimulation of the dopamine system that operates independently of environmental feedbacks and hence causes motivational runaways With respect to gambling the confined environment experienced by gamblers favors the emergence of excitatory conditioned cues so that positive feedbacks take over negative feedbacks Although drugs and gambling may act differently their abnormal activation of reward circuitry generates an underestimation of negative consequences and promotes the development of addictive compulsive behavior In Parkinson's and Huntington's disease dopamine related therapies may disrupt these feedbacks on dopamine signalling potentially leading to various addictions including pathological gambling The goal of this Research Topic is to further our understanding of the neurobiological mechanisms underlying the development of pathological gambling This eBook contains a cross disciplinary collection of research and review articles ranging in scope from animal behavioral models to human imaging studies
