

Pickguard Though shown here as components – virtually all the electronics can be removed as one piece for simply mounting the pickups in the body of Strats and Telecasters in 1950's style electronics.

Truss Rod An alloy of metal (steel and brass) that does this: keeps the neck straight. It allows adjustment to compensate for the extra strain of metal strings – the guitar had been “too strong” until the early years of the 20th century. The truss rod action and how it works varied until the late 1940s. (See page 101).

Machine Heads Six machine heads aligned in a staggered row – achieving a straight string path – important for stability especially when using vibrato. The iconic headstock has varied, but in the early 21st century the classic has returned. (See Specific color studies on page 104).

Pickups These single but effective single coil pickups revolutionized the sound of the electric guitar and set the stage for Rock ‘n’ Roll. A pickup update is simple (see page 80).

Pickup Selector One accessible three-way switch for instant changes of tone colour. Now most commonly a five-way switch and sometimes augmented with F/B, R/O, “Delta tone” and “S1 switching”. (See Specific color studies starting on page 104).
