Molecular Genetic Modification of Eucaryotes Irwin Rubenstein, Ronald L. Phillips, Charles E. Green, 2013-09-03

Molecular Genetic Modification of Eucaryotes reviews the current state of knowledge and techniques potentially useful for the molecular genetic modification of eucaryotes. The book interfaces molecular genetics, plant cell and tissue culture, and plant improvement. Topics include cell and tissue culture, protoplasts, somatic cell fusion, cellular mutagenesis, regeneration of new plant types, and the applicability of these techniques to plant improvements. Viruses and viral integration, integration and expression of foreign genetic material in human cells, *Drosophila* plant cells, and legumes, biophysical studies of DNA uptake by plants, and genetic engineering for plant protection against diseases are also discussed in detail. The book will be of interest to geneticists, cell biologists, plant breeders, plant physiologists, plant pathologists, and biochemists. **Molecular**

*Genetic Engineering in Eukaryotes* Paul F. Lurquin, 2012-12-06 This book includes the proceedings of a NATO Advanced Study Institute held at Washington State University Pullman Washington from July 26 until August 6 1982 Although genetic engineering in eukaryotes is best developed in yeast and mammalian cells the reader will find that some emphasis has been put on plant systems Indeed it was our position that the development of plant cell genetic transformation would benefit from the interactions between a comparatively smaller number of fungal and animal cell experts and a larger number of plant cell specialists representing various aspects of plant molecular genetic research On the other hand it is clear that the ultimate achievements of plant genetic engineering will have a tremendous pact on among other things food production without generating the problems of ethics encountered when one contempla tes the genetic modification of human beings Therefore this slight bias in favor of the plant kingdom simply reflects our belief that a second green revolution will benefit mankind to a greater extent than any other kind of genetic engine ering The keynote lecture of the Institute was delivered by Dr John Slaughter Director of the National Science Foundation whom we deeply thank for his words of encouragement and commitment to the genetic manipulation of plants
