*G. W. Leibniz's Monadology* Nicholas Rescher, 2012-01-11 G W Leibniz s Monadology one of the most important pieces of the Leibniz corpus is at once one of the great classics of modern philosophy and one of its most puzzling productions Because the essay is written in so condensed and compact a fashion for almost three centuries it has baffled and beguiled those who read it for the first time Nicholas Rescher accompanies the text of the Monadology section by section with relevant excerpts from some of Leibniz s widely scattered discussions of the matters at issue The result serves a dual purpose of providing a commentary of the Monadology by Leibniz himself while at the same time supplying an exposition of his philosophy using the Monadology as an outline The book contains all of the materials that even the most careful study of this could text could require a detailed overview of the philosophical background of the work and of its bibliographic ramifications a presentation of the original French text together with a new closely faithful English translation a selection of other relevant Leibniz texts and a detailed commentary Rescher also provides a survey of Leibniz s use of analogies and three separate indices of key terms and expressions Leibniz s French terminology and citations Rescher s edition of the Monadology presents Leibniz s ideas faithfully accurately and accessibly making it especially valuable to scholars and students alike

*The Monadology* Gottfried Wilhelm Leibniz, 2015-06-17 The Monadology is one of Gottfried Leibniz s best known works representing his later philosophy It is a short text which sketches in some 90 paragraphs a metaphysics of simple substances or monads The monad the word and the idea belongs to the western philosophical tradition and has been used by various authors Leibniz who was exceptionally well read could not have ignored this but he did not use it himself until mid 1696 when he was sending for print his New System Apparently he found with it a convenient way to expose his

own philosophy as it was elaborated in this period What he proposed can be seen as a modification of occasionalism developed by latter day Cartesians Leibniz surmised that there are indefinitely many substances individually programmed to act in a predetermined way each program being coordinated with all the others This is the pre established harmony which solved the mind body problem at the cost of declaring any interaction between substances a mere appearance something which Leibniz accepted Indeed it was space itself which became an appearance as in his system there was no need for distinguishing inside from outside True substances were explained as metaphysical points which Leibniz asserted are both real and exact mathematical points being exact but not real and physical ones being real but not exact Clearly besides metaphysics the developing of calculus had also provided some grounds for seeking universal elementary constituents At the empirical level use of the microscope also corroborated Leibniz s view Scientists have had great difficulties over the origin of forms entelechies or souls notes 74 of The Monadology while displaying his synonyms for monad **G.W.
