Molecular Basis Of Specificity In Nucleic Acid Drug Interactions Jerusalem Symposia:

Molecular Basis of Specificity in Nucleic Acid-Drug Interactions A. Pullman, Joshua Jortner, 2012-12-06 One of the central problems in the study of the mechanism of DNA ligand interactions is the existence and nature of sequence specificity with respect to the base pairs of DNA The presence of such a specificity could be of particular significance because it might possibly mean the involvement of specific genes in the effectiveness of the different drugs The elucidation of the factors responsible for the specificity could then be important for the development of compounds susceptible to contribute to the control of gene expression and also to the development of rationally conceived improved new generations of effective and specific chemotherapeutic agents Important recent achievements experimental and theoretical in the analysis of such sequence specificities open prospects for possible rapid progress in this field The 23rd Jerusalem symposium was devoted to the exploration of these recent achievements in relation to many types of ligand with special emphasis on antitumor drugs All major types of interaction intercalation groove binding covalent linking coordination have been considered So was also the effect of the interaction on the structure and properties of the nucleic acids and the relationship between the interaction and biological or pharmacological activities We feel that this Volume presents a relatively complete up to date account of the state of the art in this important field of research

Host-Guest Molecular Interactions Derek J. Chadwick, Kate Widdows, 2008-04-30 Composed of contributions from experts in the chemical and biological sciences it explores host guest molecular interactions leading to the formation of molecular assemblies containing two or more species Exciting applications are emerging in this field and it is expected that improved understanding of the interactions in synthetic host molecule complexes will lead to a better understanding of the more complex biological systems Topics include biomimetic chemistry preorganization self assembly template directed synthesis antibiotic binding to peptides and DNA interactions between proteins and other molecules

DNA-Protein Interactions G. Geoff Kneale, 2008-02-02 The study of protein nucleic acid interactions is currently one of the most rapidly growing areas of molecular biology DNA binding proteins are at the very heart of the regulation and control of gene expression replication and recombination Enzymes that recognize and either modify or cleave specific DNA sequences are equally important to the cell Some of the techniques reported in this volume can be used to identify previously unknown DNA binding proteins from crude cell extracts Virtually all are capable of giving direct information on the molecular basis of the interaction the location of the DNA binding site the strength and specificity of binding the identities of individual groups on specific bases involved in binding the specific amino acid residues of the protein that interact with the DNA or the effects of protein binding on gross conformation and local structure of DNA The recognition of DNA sequences by proteins is a complex phenomenon involving specific hydrogen bonding contacts to the DNA bases direct readout and or interactions with the sugar phosphate backbone indirect readout The latter interactions can also be highly specific because of sequence dependent conformational changes in the DNA In addition intercalation of

planar aromatic amino acid side chains between the DNA bases can occur most notably with single stranded DNA binding proteins Furthermore when bound many DNA binding proteins induce drastic structural changes in the DNA as an integral part of their function

Mode Selective Chemistry Joshua Jortner, R.D. Levine, A. Pullman, 2012-12-06 The Twenty Fourth Jerusalem Symposium reflected the high standards of these distinguished scientific meetings which convene once a year at the Israel Academy of Sciences and Humanities in Jerusalem to discuss a specific topic in the broad area of quantum chemistry and biochemistry The topic at this year's Jerusalem Symposium was mode selective chemistry which constitutes a truly interdisciplinary subject of central interest in the areas of chemical physics photochemistry and photobiology The main theme of the Symposium was built around the exploration of the possibility and conditions for non statistical reaction dynamics in molecules van der Waals molecules clusters and condensed phases The main issues addressed photoselective and coherent excitation modes bottlenecks for intramolecular vibrational energy redistribution the consequences of the internal structure of many atom systems and of rotational vibrational level structure for intramolecular dynamics bond selective photodissociation ultrafast chemical clocks for energy disposal coherent control of photochemical reactions and nonstatistical unimolecular reaction dynamics The interdisciplinary nature of this research area was deliberated by intensive and extensive interactions between theory and experiment This volume provides a record of the invited lectures at the Symposium

Membrane Proteins: Structures, Interactions and Models A. Pullman, Joshua Jortner, 2012-12-06 The 25th Jerusalem Symposium represents a most significant highlight in the development and history of these meetings Living within the decimal system we have celebrated with much pleasure the lath and the 20th Jerusalem Symposia With this one we experience a feeling of particular satisfaction because 25 years is different from is more than two decades and a half It is a quarter of a century It seems thus as if we have changed the dimension of our endeavour In no way do we loose the sense of modesty with respect to the significance of these meetings For the organizers however they do represent a continuity of efforts which we feel happy to have been able to carry out At this occasion it seems useful to say a few words about the origin of the Jerusalem Symposia and to recall the name of a colleague who played an essential role in their creation and has been a most efficient and devoted co organizer of the seven first of them This was Professor Ernst Bergmann one of the most distinguished founders of Israeli Science and a world famous physico organic chemist

Modelling of Biomolecular Structures and Mechanisms A.
