Surzycki, 2012-12-06 This laboratory manual gives a thorough introduction to basic techniques It is the result of practical experience with each protocol having been used extensively in undergraduate courses or tested in the authors laboratory In addition to detailed protocols and practical notes each technique includes an overview of its general importance the time and expense involved in its application and a description of the theoretical mechanisms of each step This enables users to design their own modifications or to adapt the method to different systems Surzycki has been holding undergraduate courses and workshops for many years during which time he has extensively modified and refined the techniques described here

Plant Molecular Biology — A Laboratory Manual Melody S. Clark, 2013-11-27 The aim of this manual is to encompass a broad range of the latest plant molecular biology techniques However it is acknowledged that any manual will be read and hopefully used by a wide range of people with different levels of experience Hence the remit of the manual was widened to include a full range of basic molecular techniques so that novices do not have to consult several texts to enable the execution of each major experiment The manual is divided into three main parts Part I Basic Molecular Techniques The raison d'être behind this part is to provide a background knowledge of molecular techniques but also to reduce duplication in later chapters this is particularly true of the methods contained in Chap 1 All authors provided very detailed methods and often

forgot that so me of these would be covered earlier A particular favourite was DNA extraction methods wherc everyone managed to provide a slightly different variant My view was that it is far less confusing for the reader to be presented with one standard protocol and accom panying troubleshooting tips than to read a different version in each chapter In this way the basic techniques are addressed more in depth and my apologies to all authors for judicious use of the delete key RNA methodology is covered in Chapter 3 This proceeds from the fundamentals of extraction northern blotting etc to cDNA libraries

Making Microtubules Glow Dr Thomas a Mennella,2015-12-11 For more in depth information and resources visit this manual s website <http://thomasmennella.wix.com/mtglow> The importance of a robust undergraduate research experience has been demonstrated time and again However too few undergraduates engage in genuine research and leverage this opportunity This laboratory manual is intended to accompany a laboratory course in Cell and or Molecular Biology that is designed to mimic a true research project Students work through a 10 step experimental design culminating in the construction expression and visualization of microtubules fused to green fluorescent protein in baker s yeast The steps of this project include the isolation of the tubulin gene TUB1 from yeast genomic DNA the cloning of that gene into an expression vector the amplification of this plasmid in E coli and the validation of expression of fluorescent tubulin in yeast via western blot The semester ends with the visualization of glowing yeast cells by using fluorescent microscopy Controls and validation steps are embedded throughout the project as they would be in a genuine research project This laboratory course more closely resembles a one semester undergraduate research experience than a typical lab course However because courses reach a much larger number of students compared to undergraduate research opportunities this approach provides students with a valuable research experience that remains confined to the scheduled time block of a typical lab course With detailed step by step protocols for students to follow which include the rationale and explanation for key steps Reflection Questions at the end of each exercise to promote deeper thinking and thorough Instructor s Notes for each exercise to guide the course instructor through set up for the day this manual is easily adopted and adaptable for almost any college or university This lab manual is the companion text for the laboratory course design described in *Designing Authentic Undergraduate Research Experiences in a Single Semester Lab Course* published by The American Biology Teacher Vol 77 No 7 September 2015
