*Aggregation of Therapeutic Proteins* Wei Wang, Christopher J. Roberts, 2010-12-28 This book gives pharmaceutical scientists an up to date resource on protein aggregation and its consequences and available methods to control or slow down the aggregation process While significant progress has been made in the past decade the current understanding of protein aggregation and its consequences is still immature Prevention or even moderate inhibition of protein aggregation has been mostly experimental The knowledge in this book can greatly help pharmaceutical scientists in the development of therapeutic proteins and also instigate further scientific investigations in this area This book fills such a need by providing an overview on the causes consequences characterization and control of the aggregation of therapeutic proteins

**Advances in the Theory of Control, Signals and Systems with Physical Modeling** Jean Levine, Philippe Müllhaupt, 2010-09-30 In the 60 s control signals and systems had a common linear algebraic background and according to their evolution their respective backgrounds have now dramatically differed Recovering such a common background especially in the nonlinear context is currently a fully open question The role played by physical models finite or infinite dimensional in this hypothetical convergence is extensively discussed in this book The discussion does not only take place on a theoretical basis but also in the light of two wide classes of applications among the most active in the current industrially oriented researches Electrical and Mechatronical systems Chemical Processes and systems appearing in Life Sciences In this perspective this book is a contribution to the enhancement of the dialogue between theoretical laboratories and more practically oriented ones and industries This book is a collection of articles that have been presented by leading international experts at a series of three workshops of a Bernoulli program entitled Advances in the Theory of Control Signals and Systems with Physical Modeling hosted by the Bernoulli Centre of EPFL during the first semester of 2009 It provides researchers engineers and graduate students with an unprecedented collection of topics and internationally acknowledged top quality works and surveys

literature Outlook subsections will pinpoint specific aspects related to emerging methodologies concepts and trends

**Protein Misfolding and Disease** Peter Bross, Niels Gregersen, 2008-02-02 For decades it has been known that structured conformations are important for the proper functioning of most cellular proteins However appreciation that protein folding to the functional conformations as well as the structural maintenance of protein molecules are very complex processes has only emerged during the last ten years The intimate interplay uncovered by this scientific development led us to realize that perturbations of the protein folding process and disturbances of conformational maintenance are major disease mechanisms This development has given rise to the concept of conformational diseases and the broader signature of protein folding diseases comprising diseases in which mutations or environmental stresses may result in a partial misfolding that leads then to alternative conformations capable of disturbing cellular processes This may happen by self association aggregation as in prion and Alzheimer s diseases or by incorporation of alternatively folded subunits into structural entities as in collagen diseases Another possibility is that folding to the native structure is impaired or abolished resulting in decreased steady state levels of the correctly folded protein as is observed in cystic fibrosis and  $\alpha_1$  antitrypsin deficiency as well as in many enzyme deficiencies In addition deficiencies of proteins that are engaged in assisting and supervising protein folding protein quality control may impair the folding of many other proteins resulting in pathological phenotypes Examples of this are the spastic paraplegia attributable to mutations in mitochondrial protease chaperone complexes

**Protein Misfolding, Aggregation and Conformational Diseases** Vladimir N. Uversky, Anthony Fink, 2007-11-24 Research indicates that most neurodegenerative diseases systemic amyloidoses and many others arise from the misfolding and aggregation of an underlying protein This is the first book to discuss significant achievements in protein structure function relationships in biochemistry molecular biology and molecular medicine The authors summarize recent progress in the understanding of the relationships between protein misfolding aggregation and development of protein deposition disorders
