The Renaissance Edward Maslin Hulme, 1914 **Copernicus** Catherine M. Andronik, 2014-12-15 Copernicus worked with primitive scientific instruments to prove that Earth revolved around the sun The idea of Earth circling the sun is universally accepted today but this was not always the case Centuries ago it was widely believed that the earth stood still and the sun moved At first Copernicus was denounced and ridiculed for this belief Later scientists with more advanced instruments proved that Earth did indeed revolve around the sun Many of our modern advances in science would not have been possible without the heliocentric theory of Copernicus

Contingency and Natural Order in Early Modern Science

Pietro Daniel Omodeo, Rodolfo Garau, 2019-09-09 This volume considers contingency as a historical category resulting from the combination of various intellectual elements epistemological philosophical material as well as theological and broadly speaking intellectual With contributions ranging from fields as diverse as the histories of physics astronomy astrology medicine mechanics physiology and natural philosophy it explores the transformation of the notion of contingency across the late medieval Renaissance and the early modern period Underpinned by a necessitated vision of nature seventeenth century mechanism widely identified apparent natural irregularities with the epistemological limits of a certain explanatory framework However this picture was preceded by and in fact emerged from a widespread characterization of contingency as an ontological trait of nature typical of late Scholastic and Renaissance science On these bases this volume shows how epistemological categories which are preconditions of knowledge as historically situated a priori and seemingly self evident are ultimately rooted in time Contingency is intrinsic to scientific practice Whether observing the behaviour of a photon diagnosing a patient or calculating the orbit of a distant planet scientists face the unavoidable challenge of dealing with data that differ from their models and expectations However epistemological categories are not fixed in time Indeed there is something fundamentally different in the way an Aristotelian natural philosopher defined a wonder or a monstrous birth as contingent a modern scientist defines the unexpected result of an experiment and a quantum physicist the behavior of a photon Although to each inquirer these instances appeared self evidently contingent each also employs the concept differently

Understanding Information and Computation Philip Tetlow,2016-02-24 The World Wide Web is truly astounding It has changed the way we interact learn and innovate It is the largest sociotechnical system humankind has created and is advancing at a pace that leaves most in awe It is an unavoidable fact that the future of the world is now inextricably linked to the future of the Web Almost every day it appears to change to get better and increase its hold on us For all this we are starting to see underlying stability emerge The way that Web sites rank in terms of popularity for example appears to follow laws with which we are familiar What is fascinating is that these laws were first discovered not in fields like computer science or information technology but in what we regard as more fundamental disciplines like biology physics and mathematics Consequently the

Web although synthetic at its surface seems to be quite natural deeper down and one of the driving aims of the new field of Web Science is to discover how far down such naturalness goes If the Web is natural to its core that raises some fundamental questions It forces us for example to ask if the central properties of the Web might be more elemental than the truths we cling to from our understandings of the physical world In essence it demands that we question the very nature of information Understanding Information and Computation is about such questions and one possible route to potentially mind blowing answers [Asia, Europe, and the Emergence of Modern Science](#) A.
