Simplicity in Vision Peter A. van der Helm, 2014-02-06 A multidisciplinary account of human perceptual organization with rigorous theoretical foundations quantitative and qualitative models and extensive empirical evidence **Simplicity in Vision** Peter A. van der Helm, 2014-02-06 Perceptual organization is the neuro cognitive process that enables us to perceive scenes as structured wholes consisting of objects arranged in space Simplicity in Vision explores the intriguing idea that these perceived wholes are given by the simplest organizations of the scenes Peter A van der Helm presents a truly multidisciplinary approach to answer fundamental questions such as Are simplest organizations sufficiently reliable to guide our actions What is the nature of the regularities that are exploited to arrive at simplest organizations To account for the high combinatorial capacity and speed of the perceptual organization process he proposes transparallel processing by hyperstrings This special form of distributed processing not only gives classical computers the extraordinary computing power that seemed reserved for quantum computers but also explains how neuronal synchronization relates to flexible self organizing cognitive architecture in between the relatively rigid level of neurons and the still elusive level of consciousness

From Newtonian Toward Quantum Imaginations: Volume 1: Unriddling the Quantum Enigma Mohammad H. Tamdgidi, 2020-01-20 In this major new study in the sociology of scientific knowledge social theorist Mohammad H Tamdgidi reports having unriddled the so called quantum enigma This book opens the lid of the Schrödinger's Cat box of the quantum

enigma after decades and finds something both odd and familiar Not only the cat is both alive and dead it has morphed into an elephant in the room in whose interpretation Einstein Bohr Bohm and others were each both right and wrong because the enigma has acquired both localized and spread out features whose unriddling requires both physics and sociology amid both transdisciplinary and transcultural contexts The book offers in a transdisciplinary and transcultural sociology of self knowledge framework a relativistic interpretation to advance a liberating quantum sociology Deeper methodological grounding to further advance the sociological imagination requires investigating whether and how relativistic and quantum scientific revolutions can induce a liberating reinvention of sociology in favor of creative research and a just global society This however necessarily leads us to confront an elephant in the room the quantum enigma In *Unriddling the Quantum Enigma* the first volume of the series commonly titled *Liberating Sociology From Newtonian toward Quantum Imaginations* sociologist Mohammad H Tamdgidi argues that unriddling the quantum enigma depends on whether and how we succeed in dehabituating ourselves in favor of unified relativistic and quantum visions from the historically and ideologically inherited classical Newtonian modes of imagining reality that have subconsciously persisted in the ways we have gone about posing and interpreting or not the enigma itself for more than a century Once this veil is lifted and the enigma unriddled he argues it becomes possible to reinterpret the relativistic and quantum ways of imagining reality including social reality in terms of a unified nonreductive creative dialectic of part and whole that fosters quantum sociological imaginations methods theories and practices favoring liberating and just social outcomes The essays in this volume develop a set of relativistic interpretive solutions to the quantum enigma Following a survey of relevant studies and an introduction to the transdisciplinary and transcultural sociology of self knowledge framing the study overviews of Newtonianism relativity and quantum scientific revolutions the quantum enigma and its main interpretations to date are offered They are followed by a study of the notion of the wave particle duality of light and the various experiments associated with the quantum enigma in order to arrive at a relativistic interpretation of the enigma one that is shown to be capable of critically cohering other offered interpretations The book concludes with a heuristic presentation of the ontology epistemology and methodology of what Tamdgidi calls the creative dialectics of reality The volume essays involve critical comparative integrative reflections on the relevant works of founding and contemporary scientists and scholars in the field This study is the first in the monograph series *Tayyebbeh Series in East West Research and Translation of Human Architecture Journal of the Sociology of Self Knowledge XIII 2020* published by OKCIR Omar Khayyam Center for Integrative Research in Utopia Mysticism and Science Utopistics OKCIR is dedicated to exploring in a simultaneously world historical and self reflective framework the human search for a just global society It aims to develop new conceptual methodological theoretical historical practical pedagogical inspirational and disseminative structures of knowledge whereby the individual can radically understand and determine how world history and her his selves constitute one another Reviews Mohammad H Tamdgidi s *Liberating Sociology From Newtonian Toward*

Quantum Imaginations Volume 1 Unriddling the Quantum Enigma hits the proverbial nail on the head of an ongoing problem not only in sociology but also much social science namely many practitioners allegiance consciously or otherwise to persisting conceptions of science that get in the way of scientific and other forms of theoretical advancement Newtonianism has achieved the status of an idol and its methodology a fetish the consequence of which is an ongoing failure to think through important problems of uncertainty indeterminacy multivariation multidisciplinary and false dilemmas of individual agency versus structure among many others Tamdgidi has done great service to social thought by bringing to the fore this problem of disciplinary decadence and offering in effect a call for its teleological suspension thinking beyond disciplinarity through drawing upon and communicating with the resources of quantum theory not as a fetish but instead as an opening for other possibilities of social including human understanding The implications are far reaching as they offer as the main title attests liberating sociology from persistent epistemic shackles and thus many disciplines and fields connected to things social This is exciting work A triumph The reader is left with enthusiasm for the second volume and theorists of many kinds with proverbial work to be done Professor Lewis R Gordon Honorary President of the Global Center for Advanced Studies and author of Disciplinary Decadence Living Thought in Trying Times Routledge Paradigm 2006 and Freedom Justice and Decolonization Routledge forthcoming 2020 Social sciences are still using metatheoretical models of science based on 19th century newtonian concepts of time and space Mohammad H Tamdgidi has produced a tour de force in social theory leaving behind the old newtonian worldview that still informs the social sciences towards a 21st century non dualistic non reductionist transcultural transdisciplinary post Einsteinian quantum concept of TimeSpace Tamdgidi goes beyond previous efforts done by titans of social theory such as Immanuel Wallerstein and Kyriakos Kontopoulos This book is a quantum leap in the social sciences at large Tamdgidi decolonizes the social sciences away from its Eurocentric colonial foundations bringing it closer not only to contemporary natural sciences but also to its convergence with the old Eastern philosophical and mystical worldviews This book is a masterpiece in social theory for a 21st century decolonial social science A must read Professor Ramon Grosfoguel University of California at Berkeley Tamdgidi s Liberating Sociology succeeds in adding physical structures to the breadth of the world changing vision of C Wright Mills the man who mentored me at Columbia Relativity theory and quantum mechanics can help us to understand the human universe no less than the physical universe Just as my Creating Life Before Death challenges bureaucracy s conformist orientation so does Liberating Sociology liberate the infinite possibilities inherent in us Given our isolation in the Coronavirus era we have time to follow Tamdgidi in his journey into the depth of inner space where few men have gone before It is there that we can gain emotional strength just as Churchill Roosevelt and Mandela empowered themselves That personal development was needed to address not only their own personal problems but also the mammoth problems of their societies We must learn to do the same Bernard Phillips Emeritus Sociology Professor Boston University

Olson,2003 Understanding visual perceptual organization remains a challenge for vision science Perceptual Organization in Vision Behavioral and Neural Perspectives explores ideas emanating from behavioral developmental neuropsychological neurophysiological and computational approaches to the problem of perceptual organization The growing body of research on perceptual organization has converged on a number of critical issues most of which are addressed in this volume These include issues concerning the nature and order of organizational processes the stimulus factors that engage the mechanisms of organization the developmental stage at which the mechanisms of organization are available the role of past experience and learning in organization the neural mechanisms underlying perceptual organization and the relations between perceptual organization and other cognitive processes in particular object recognition and visual attention Divided into four parts the book is designed not only to detail the current state of the art in the field but also to promote an interdisciplinary approach to the study of perceptual organization Part I presents an overview of the problem of perceptual organization different frameworks for understanding perceptual organization and a state of the art summary of the domain Part II details which organizational processes are hardwired in the perceptual system which are acquired through experience and how object perception relates to other aspects of cognition Part III describes various attempts to understand the neural mechanisms underlying perceptual organization using two different approaches neurophysiological and neuropsychological Part IV offers a computational approach to the problem This book is intended for cognitive psychologists neuroscientists computational vision scientists and developmental psychologists

Perceptual Organization in Computer Vision ,1999 **Perceptual Organization for Artificial Vision Systems** Kim L. Boyer,Sudeep Sarkar,2012-12-06 Perceptual Organization for Artificial Vision Systems is an edited collection of invited contributions based on papers presented at The Workshop on Perceptual Organization in Computer Vision held in Corfu Greece in September 1999 The theme of the workshop was Assessing the State of the Community and Charting New Research Directions Perceptual organization can be defined as the ability to impose structural regularity on sensory data so as to group sensory primitives arising from a common underlying cause This book explores new models theories and algorithms for perceptual organization Perceptual Organization for Artificial Vision Systems includes contributions by the world s leading researchers in the field It explores new models theories and algorithms for perceptual organization as well as demonstrates the means for bringing research results and theoretical principles to fruition in the construction of computer vision systems The focus of this collection is on the design of artificial vision systems The chapters comprise contributions from researchers in both computer vision and human vision **Perceptual Organization in Computer and Biological Vision** James Elder,Dirk Bernhardt-Walther,Anitha Pasupathy ,Mary A. Peterson,2024-08-22 A principal challenge for both

biological and machine vision systems is to integrate and organize the diversity of cues received from the environment into the coherent global representations we experience and require to make good decisions and take effective actions Early psychological investigations date back more than 100 years to the seminal work of the Gestalt school Yet in the last 50 years neuroscientific and computational approaches to understanding perceptual organization have become equally important and a full understanding requires integration of all three approaches This highly interdisciplinary Research Topic welcomes contributions spanning Computer Science Psychology and Neuroscience with the aim of presenting a single unified collection that will encourage integration and cross fertilization across disciplines

Special Issue Kim L. Boyer, Sudeep Sarkar, 1999 Learning to See Yuri Ostrovsky (Ph. D.), 2010 One of the great puzzles of vision science is how over the course of development the complex visual array comprising many regions of different colors and luminances is transformed into a sophisticated and meaningful constellation of objects Gestaltists describe some of the rules that seem to govern a mature parsing of the visual scene but where do these rules come from Are they innate endowed by evolution or do they come somehow from visual experience The answer to this question is usually confounded in infant studies as the timelines of maturation and experience are inextricably linked Here we describe studies with a special population of late onset vision patients which suggest a distinction between those capabilities available innately and those which are crafted via learning from the visual environment We conclude with a hypothesis based on these findings and other evidence that early available common fate motion cues provide a level of perceptual organization which forms the basis for the learning of subsequent cues
