

Gene Mutation Activity – Point and Frameshift

Procedure:

1. The following is a piece of DNA that a protein will be made from. Write the complementary mRNA in the spaces below it.
2. G – A – C – G – C – C – A – T – G – G – A – A – G – T – C
3. _
4. Draw a vertical line between each codon. Look up the amino acid for each codon on the codon chart and write them in the spaces below. Be sure to do this in order. This is the “normal protein.”
5. _
6. The following is the same piece of DNA but with a deletion mutation in the second codon. Write the complementary mRNA in the spaces below it.
7. G – A – C – G – C – A – T – G – G – A – A – G – T – C
8. _
9. Draw a vertical line between each codon. Do you see any differences between the codons on this mutated strand and the normal strand? _____ Describe them.

10. Look up the amino acid for each codon on the codon chart and write them in the spaces below.
11. _
12. Was the number of amino acids the same as the original strand? _____
13. How many of the amino acids were the same as the original strand? _____
14. How many of the amino acids were different from the original strand? _____
15. Do you believe that this mutated DNA strand would create the same protein or a different protein as the original? _____ Why? _____

16. The following is the same piece of DNA but with an insertion mutation in the third codon. Write the complementary mRNA bases below it.

Their Origin by Mutation Hugo de Vries, 2023-11-17 In *Species and Varieties Their Origin by Mutation* Hugo de Vries offers a groundbreaking exploration of the concept of mutation and its role in the development of new species. Written in a clear and concise style, De Vries delves into the mechanisms of genetic variation and how it contributes to the diversity of life forms. Drawing on his extensive research and experiments with plant breeding, the author presents a comprehensive analysis of evolution through mutation in both plants and animals, challenging established theories of natural selection. This influential work is a key text in the study of genetics and evolutionary biology, providing valuable insights into the mechanisms of biological diversity. Hugo de Vries' meticulous approach and innovative ideas have left a lasting impact on the field of biology, shaping our understanding of the origins of species and the process of adaptation. His work continues to inspire further research and exploration into the mechanisms of genetic variation and evolutionary change. *Species and Varieties Their Origin by Mutation* is a must-read for anyone interested in the fascinating world of evolutionary biology and the complex processes that drive the diversity of life on Earth.

Discovering Speech, Words, and Mind Dani Byrd, Toben H. Mintz, 2011-09-26 Written in a lively style, *Discovering Speech Words and Mind* applies a scientific approach to the study of various aspects of speech, using everyday examples to introduce the beginning student to the world of language and cognition. An accessible introduction to the fundamentals of speech production, speech perception, word formation, language acquisition, and speech disorders. Considers how the informational content of the speech signal relates to phonological units connecting the three areas of speech: words and mind. Focuses on speech production and recognition at the word level and below, and includes sign languages. Written in a highly accessible style for students with no background in linguistics or psychology. Packed with numerous student-friendly features, including engaging examples, illustrations, and sidebars for further discussion. The Limits of Grammaticalization Anna Giacalone Ramat, Paul J. Hopper, 1998-01-01 The earliest use of the term grammaticalization was to refer to the process whereby lexical words of a language such as English *keep* in *he keeps* become grammatical forms such as the auxiliary *in he keeps looking at me*. Changes of this kind, which involve semantic fading and a downshift from a major to a minor category, have generally been agreed to come under the heading of grammaticalization. But other changes that equally contribute to new grammatical forms do not involve this kind of fading. In recent years, a debate has arisen over how to constrain the term theoretically. Is grammaticalization to be distinguished from lexicalization, the creation and fixing of new words out of older patterns of compounding? If so, how is the line to be drawn between a form that is grammatical and one that is lexical? Should the term grammaticalization be extended to the study of the origins of grammatical constructions in general? If so, it will have to include broader issues such as word order change and the reanalysis of phrases. What principles govern these processes? Is grammaticalization a unidirectional event, or can change occur in the reverse direction? The authors of the papers in this volume approach these important questions from a variety of data types, including historical texts, creoles,
