Spline Functions Larry L. Schumaker, 2015-08-13 This book describes in detail the key algorithms needed for computing with spline functions and illustrates their use in solving several basic problems in numerical analysis including function approximation numerical quadrature data fitting and the numerical solution of PDE s The focus is on computational methods for bivariate splines on triangulations in the plane and on the sphere although both univariate and tensor product splines are also discussed The book contains numerous examples and figures to illustrate the methods and their performance All of the algorithms in the book have been coded in a separate MATLAB package available for license The package can be used to run all of the examples in the book and also provides readers with the essential tools needed to create software for their own applications In addition to the included bibliography a list of over 100 pages of additional references can be found on the book s website

Handbook of Splines Gheorghe Micula, Sanda Micula, 2012-12-06 The purpose of this book is to give a comprehensive introduction to the theory of spline functions together with some applications to various fields emphasizing the significance of the relationship between the general theory and its applications At the same time the goal of the book is also to provide new material on spline function theory as well as a fresh look at old results being written for people interested in research as well as for those who are interested in applications The theory of spline functions and their applications is a relatively recent field of applied mathematics In the last 50 years spline function theory has undergone a wonderful development with many new directions appearing during this time This book has its origins in the wish to adequately describe this development from the notion of spline introduced by I J Schoenberg 1901 1990 in 1946 to the newest recent theories of spline wavelets or spline fractals Isolated facts about the functions now called splines can be found in the papers of L Euler A Lebesgue G Birkhoff J

Quantitative Analysis in Financial Markets Marco Avellaneda, 1999. This invaluable book contains lectures delivered at the celebrated Seminar in Mathematical Finance at the Courant Institute. The lectures and presenters of papers are prominent researchers and practitioners in the field of quantitative financial modeling. Most are faculty members at leading universities or Wall Street practitioners. The lectures deal with the emerging science of pricing and hedging derivative securities and more generally managing financial risk. Specific articles concern topics such as option theory, dynamic hedging, interest rate modeling, portfolio theory, price forecasting using statistical methods etc.

Methods of Shape-preserving Spline Approximation Boris I. Kvasov, 2000. This book aims to develop algorithms of shape preserving spline approximation for curves, surfaces with automatic choice of the tension parameters. The resulting curves, surfaces retain geometric properties of the initial data such as positivity, monotonicity, convexity, linear and planar sections. The main tools used are generalized tension splines and B-splines. A difference method for constructing tension splines is also developed which permits one to avoid the computation of hyperbolic functions and provides other computational advantages. The algorithms of monotone parametrization described improve an adequate representation of the resulting shape preserving curves, surfaces. Detailed descriptions of algorithms are given with a strong emphasis on their computer implementation. These algorithms can be applied to solve many problems in computer aided geometric design.

Spline Collocation Methods for Partial Differential Equations William E. Schiesser, 2017-05-08. A comprehensive approach to numerical partial differential equations. Spline Collocation Methods for Partial Differential Equations combines the collocation analysis of partial differential equations (PDEs) with the method of lines (MOL) in order to simplify the solution process. Using a series of example applications, the author delineates the main features of the approach in detail, including an established mathematical framework. The book also clearly demonstrates that spline collocation can offer a comprehensive method for numerical integration of PDEs when it is used with the MOL, in which spatial boundary value derivatives are approximated with splines, including the boundary conditions. R, an open source scientific programming system, is used throughout for programming the PDEs and numerical algorithms, and each section of code is clearly explained. As a result, readers gain a complete picture of the model and its computer implementation without having to fill in the details of the numerical analysis algorithms or programming. The presentation is

not heavily mathematical and in place of theorems and proofs detailed example applications are provided. Appropriate for scientists, engineers, and applied mathematicians. Spline Collocation Methods for Partial Differential Equations introduces numerical methods by first presenting basic examples followed by more complicated applications. Employs R to illustrate accurate and efficient solutions of the PDE models. Presents spline collocation as a comprehensive approach to the numerical integration of PDEs and an effective alternative to other well-established methods. Discusses how to reproduce and extend the presented numerical solutions. Identifies the use of selected algorithms such as the solution of nonlinear equations and banded or sparse matrix processing. Features a companion website that provides the related R routines. Spline Collocation Methods for Partial Differential Equations is a valuable reference and/or self-study guide for academics, researchers, and practitioners in applied mathematics and engineering, as well as for advanced undergraduates and graduate-level students.

International Symposium on Fuzzy Systems, Knowledge Discovery and Natural Computation (FSKD 2014) Defu Zhang, Xiamen University, China, 2014-09-02. ICNC FSKD is a premier international forum for scientists and researchers to present the state of the art of data mining and intelligent methods inspired from nature, particularly biological, linguistic, and physical systems, with applications to computers, circuits, systems, control, communications, and more. Plasma Physics via Computer Simulation C.K. Birdsall, A.B. Langdon, 2018-10-08.

Divided into three main parts, the book guides the reader to an understanding of the basic concepts in this fascinating field of research. Part 1 introduces you to the fundamental concepts of simulation. It examines one-dimensional electrostatic codes and electromagnetic codes and describes the numerical methods and analysis. Part 2 explores the mathematics and physics behind the algorithms used in Part 1. In Part 3, the authors address some of the more complicated simulations in two and three dimensions. The book introduces projects to encourage practical work. Readers can download plasma modeling and simulation software, the ES1 program, with implementations for PCs and Unix systems, along with the original FORTRAN source code. Now available in paperback. Plasma Physics via Computer Simulation is an ideal complement to plasma physics courses and for self-study. Simulation and Experiment in Laser Metrology Zoltan Füzessy, Werner Jüotner, Wolfgang Osten, 1996. These proceedings document about 45 contributions to the International Symposium on Laser Applications in Precision Measurement held in Balatonfured, Hungary, during June 3-6, 1996. Special emphasis was given to the combination of simulation and experiment in laser metrology. International experts provide a survey over a large variety of their latest achievements and developments in this rapidly advancing field. Over the last years, optical measurement techniques like structured illumination, holographic interferometry, and tomography were applied more and more in combination with CAE tools such as CAD and FEM. This combination has found a world of new applications in scientific and industrial branches interested in highly exact but nondestructive and noncontact measurement of technical components.
