Perpetual Trouble Shooter's Manual John Francis Rider,1936 *3D Geo-Information Sciences* Jiyeong Lee,Siyka Zlatanova,2008-10-24 In recent years 3D geo information has become an important research area due to the increased complexity of tasks in many geo scientific applications such as sustainable urban planning and development civil engineering risk and disaster management and environmental monitoring Moreover a paradigm of cross application merging and integrating of 3D data is observed The problems and challenges facing today s 3D software generally application oriented focus almost exclusively on 3D data transportability issues the ability to use data originally developed in one modelling visualisation system in other and vice versa Tools for elaborated 3D analysis simulation and prediction are either missing or when available dedicated to specific tasks In order to respond to this increased demand a new type of system has to be developed A fully developed 3D geo information system should be able to manage 3D geometry and topology to integrate 3D geometry and thematic information to analyze both spatial and topological relationships and to present the data in a suitable form In addition to the simple geometry types like point line and polygon a large variety of parametric representations freeform curves and surfaces or sweep shapes have to be supported Approaches for seamless conversion between 3D raster and 3D vector representations should be available they should allow analysis of a representation most suitable for a specific application

Monthly Catalog of United States Government Publications ,2001 **A Neolithic Ceremonial Complex in Galloway** Julian Thomas,2015-07-31 A complex enclosure identified by aerial photography at Dunragit Galloway was demonstrated by excavation to have been of Late Neolithic date and comprised three concentric timber ramped post rings 120 300 m in diameter The two outer post rings each comprised large uprights interspersed with smaller members probably forming a continuous palisade Each was a single phase structure

and the posts had rotted out The inner ring had largely been made up of large freestanding posts most of which had rotted away but some of which had been deliberately removed the post holes being considerably larger than those of the two outer rings Where posts had been pulled out a number of elaborate deposits had been placed in the crater left by the post removal The entrances to the post rings are not aligned and the preferred interpretation is that the monument as a whole had two phases of construction in each of which a timber circle was surrounded by a palisade and in which the middle post ring succeeded the outer or vice versa The enclosure had been preceded by a post defined cursus monument in which all the post had been burned in situ and numerous other post holes were located on the same axis as the cursus extending beyond the monument itself The most elaborate entrance connected with the middle post ring is composed of two parallel lines of features presumably post holes opening toward the south and aligned on a large earthen mound at Droughduil 400 m away Droughduil Mote though recorded as a medieval motte recalls the association of various very large mounds with with henges or palisaded enclosures as at Silbury Hill Wiltshire Excavation demonstrated that it had been constructed with stepped sides and that a stone cairn had been constructed on its summit A series of optically stimulated luminescence dates on the accumulated sand over the surface of the mound demonstrated that it was certainly not medieval and was probably Neolithic in date
