The incidence of metastatic disease in the central nervous system CNS is rising According to current estimates up to a third of adult cancer patients will suffer from CNS metastasis Clinical evidence based data from prospective randomized trials are rare however because CNS metastasis patients were often excluded from clinical trial participation The management of CNS metastasis patients is therefore rather ill defined and an interdisciplinary challenge Recent basic and translational science data have begun contributing to a more profound understanding of the molecular mechanisms leading to invasion of tumor cells into the CNS This report reviews advances challenges and perspectives in this field
