The Globalisation of School Choice? Martin Forsey, Scott Davies, Geoffrey Walford, 2008-05-12 Which school should I choose for my child For many parents this question is one of the most important of their lives School choice is a slogan being voiced around the globe conjuring images of a marketplace with an abundance of educational options Those promoting educational choice also promise equality social advantage autonomy and self expression to families But what does this globalisation of school choice actually look like on the ground This collection brings together educationalists anthropologists and sociologists who use a rich array of empirical data to understand the complex realities of school choice across a range of political and social settings in Argentina Australia Canada China England India Israel Japan Singapore Tanzania and the United States Together they show that while the language of school choice has spread globally it has done so unevenly across and within nations and is always interpreted through local social and historical contexts Neo liberal policy initiatives are re-shaping education systems in many nations but in complex and varied ways This collection shows that rather than eliminating equity concerns they re-embed them within new frameworks of choice and accountability This is an important book for those interested in comparative education as well as the sociology and politics of schooling

Universities as Centres of Research and Knowledge Creation: An Endangered Species?, 2008-01-01

Today unprecedented emphasis is being placed on research as key motor for advancing the knowledge society and its offspring the knowledge economy. Consequently research on the state of research has moved high on the priority agendas for governments, for their specialized agencies and bodies devoted to this area and for higher education institutions. Against this background the central premise of the 2006 Global Colloquium of the UNESCO Forum for Higher Education Research and Knowledge Universities as Centres of Research and Knowledge Creation: An Endangered Species was that research is a key ingredient in the institutional identity of universities and an indispensable prerequisite for a successful programme of teaching and public service. Based on contributions to this Colloquium, authors from twenty countries from all regions of the world analyse aspects related to the research function of universities. This book primarily addresses the variety and gaps in higher education across the globe, concentrating on the challenges to transitional and developing countries. It addresses the related issues of research capacity, research productivity and research relevance and utility. Research capacity appears as a necessary but not sufficient condition for research productivity and research productivity must be assessed in terms of utility and relevance. This volume provides a global range of insights both for policy makers and for higher education and research communities.
