Hot, Hungry Planet Lisa Palmer,2017-05-09 Earth will have more than 9 6 billion people by 2050 according to U N predictions With resources already scarce how will we feed them all Journalist Lisa Palmer has traveled the world for years documenting the cutting edge innovations of people and organizations on the front lines of fighting the food gap Here she shares the story of the epic

journey to solve the imperfect relationship between two of our planet's greatest challenges: climate change and global hunger. *Hot Hungry Planet* focuses on three key concepts that support food security and resilience in a changing world: social, educational, and agricultural advances; land use and technical actions by farmers; and policy nudges that have the greatest potential for reducing adverse environmental impacts of agriculture while providing more food. Palmer breaks down this difficult subject through seven concise and easily digestible case studies over the globe and presents the stories of individuals in six key regions: India, sub-Saharan Africa, the United States, Latin America, the Middle East, and Indonesia, painting a hopeful picture of both the world we want to live in and the great leaps it will take to get there. Technology Development

Assistance for Agriculture Norman Clark, Andy Frost, Ian Maudlin, Andrew Ward, 2013-05-02. Stemming from an 11-year DFID-funded programme under its Renewable Natural Resources Research Strategy (RNRRS) Technology Development Assistance for Agriculture, Putting Research into Low Income Countries reviews part of this programme as a case study of a broader issue of technology development for Africa. Controversially, it critiques current international technology development assistance and focuses on the potential role of the private sector in agricultural technology development, as well as providing insights for future cognate science policy and practice. The book focuses on the RIU Best Bets Africa sub-programme. This identified promising proposals to take existing agriculture research products and put these into use in ways that would benefit the poor in developing countries. The sum set aside for this was 5 million. The empirical sections of the book cover project selection, progress, and programme management over a 2009-2012 period, with special attention paid to lessons learned that may have implications for future cognate technology development assistance. This topical book gives direct evidence of meeting objectives and delivering real changes in technology development for Africa to postgraduate students, researchers, international bodies, NGOs, policy makers, and government organisations working on natural resource management, technology development assistance, and low-income country agriculture. **Transforming food systems**

Dr Dave Watson, 2024-07-09. Sets out the historical context for understanding the current challenges facing food production. Gives a unique overview of the range of reformist, progressive, and radical solutions to reforming the global food system. Provides a framework for comparing the relative strengths and weaknesses of different solutions. *The Cambridge Handbook of Social Problems*: A. Javier Treviño, 2018-03-22. The introduction of the Affordable Care Act in the United States, the increasing use of prescription drugs, and the alleged abuse of racial profiling by police are just some of the factors contributing to twenty-first-century social problems. *The Cambridge Handbook of Social Problems* offers a wide-ranging roster of the social problems currently pressing for attention and amelioration. Unlike other works in this area, it also gives great consideration to theoretical and methodological discussions. This Handbook will benefit both undergraduate and graduate students eager to understand the sociology of social problems. It is suitable for classes in social problems, current events, and social theory. Featuring the most current research, the Handbook provides an especially useful resource for

sociologists and graduate students conducting research *The Solar Revolution* Steve McKevitt, Tony Ryan, 2014-07-03 It is an astonishing fact that capturing all the energy in just one hour's worth of sunlight would enable us to meet the planet's food and energy needs for an entire year. The Solar Revolution tells the story of how scientists are working to reconnect us to the solar economy harnessing the power of the sun to provide sustainable food and energy for a global population of 10 billion people, an achievement that would end our dependence on fossilised sunshine in the form of coal, oil, and gas, and remake our connection with the soil that grows our food. Steve McKevitt and Tony Ryan describe the human race's complex relationship with the sun and take us back through history to see how our world became the place it is today, chemically, geologically, ecologically, climatically, and economically, before moving on to the cutting-edge science and technology that will enable us to live happily in a sustainable future.

Food for All in Africa Gordon Conway, Ousmane Badiane, Katrin Glatzel, 2019-11-15 Africa requires a new agricultural transformation that is appropriate for Africa that recognizes the continent's diverse environments and climates and that takes into account its histories and cultures while benefiting rural smallholder farmers and their families. In this boldly optimistic book, Sir Gordon Conway, Ousmane Badiane, and Katrin Glatzel describe the key challenges faced by Africa's smallholder farmers and present the concepts and practices of Sustainable Intensification (SI) as opportunities to sustainably transform Africa's agriculture sector and the livelihoods of millions of smallholders. The way forward they write will be an agriculture sector deeply rooted within SI, producing more with less, using fertilizers and pesticides more prudently, adapting to climate change, improving natural capital, adopting new technologies, and building resilience at every stage of the agriculture value chain. Food for All in Africa envisions a virtuous circle generated through agricultural development rooted in SI that results in greater yields, healthier diets, improved livelihoods for farmers, and sustainable economic opportunities for the rural poor that in turn generate further investment. It describes the benefits of digital technologies for farmers and the challenges of transforming African agricultural policies and creating effective and inspiring leadership. Food for All in Africa demonstrates why we should take on the challenge and provides ideas and methods through which it can be met.

Food Production and Nature Conservation Iain J. Gordon, Herbert H.T. Prins, Geoff R. Squire, 2016-11-25 Feeding the world's growing human population is increasingly challenging, especially as more people adopt a western diet and lifestyle. Doing so without causing damage to nature poses an even greater challenge. This book argues that in order to create a sustainable food supply whilst conserving nature, agriculture and nature must be reconnected and approached together. The authors demonstrate that while the links between nature and food production have to some extent already been recognized, until now the focus has been to protect one from the impacts of the other. Instead, it is argued that nature and agriculture can and should work together and ultimately benefit from one another. Chapters describe efforts to protect nature through globally connected protected area systems and illustrate how farming methods are being shaped to protect nature within agricultural systems. The authors also point to many ways in which nature

benefits agriculture through the ecosystem services it provides Overall the book shows that nature conservation and food production must be considered as equally important components of future solutions to meet the global demand for food in a manner that is sustainable for both the human population and the planet as a whole *The Giving Book* Ellen Sabin,2004
