On the Time and Temperature Dependent Behaviour of Laminated Amorphous Polymers Subjected to Low-Velocity Impact Andreas Rühl, 2017-04-05 The thesis investigates a polymeric laminate consisting of poly methyl methacrylate PMMA and thermoplastic polyurethane TPU experimentally and numerically with regard to its impact behaviour and applicability After a basic characterization of the monolithic materials PMMA TPU PMMA laminates were subjected to impact loadings at velocities up to 5 m s using threepoint bending and dart impact tests Based on the experimental basis different material models for the Finite Element simulation are presented which are able to capture the time and temperature dependent behaviour of the laminate Final validation experiments consisting of head dummy impacts at 10 m s on automotive side windows were conducted for PMMA and the laminate in order to investigate their applicability as glass substitution products

Practical Laboratory Automation Matheus C. Carvalho, 2017-06-19 By closing the gap between general programming books and those on laboratory automation this timely book makes accessible to every laboratory technician or scientist what has traditionally been restricted to highly specialized professionals Following the idea of learning by doing the book provides an introduction to scripting using AutoIt with many workable examples based on real world scenarios A large portion of the book tackles the traditionally hard problem of instrument synchronization including remote web based synchronization Automated result processing database operation and creation of graphical user interfaces are also examined Readers of this book can immediately profit from the new knowledge in terms of both increased efficiency and reduced costs in laboratory operation Above all laboratory technicians and scientists will learn that they are free to choose whatever equipment they desire when configuring an automated analytical setup regardless of manufacturers suggested specifications **Mergent**
