Michael Lewis The New New Thing:

The New New Thing: A Silicon Valley Story Michael M. Lewis, 2000 Tells the unlikely story of Silicon Valley through the life of one of its great achievers Jim Clark who founded Silicon Graphics and Netscape and may be on the verge of another trillion dollar company *The New New Thing* Michael Lewis, 2000-07-01 **Summary of Michael Lewis's The New New Thing** Everest Media, 2022-06-13T22:59:00Z Please note This is a companion version not the original book Sample Book Insights 1 Lord Jim Clark was the creator of Netscape and the Internet boom which triggered one of the most astonishing grabfests in the history of capitalism He was always claiming that he wanted to relax but he could not do so for more than a minute He had to change something 2 The Dutch do not enjoy being mistaken for Germans so they find a funny side to life where none exists I told a Dutchman that I was going sailing in the North Sea and he laughed nervously 3 Wolter was the manager of the Huisman Shipyard and he was extremely pessimistic about the new yachts that were being built there He believed that every new yacht that left the yard was an accident waiting to happen 4 The launch of the computerized sailboat Hyperion was delayed due to the weather The head programmer Steve Hague was uncertain about the computer's gauges and accuracy The wind speed gauges had frozen at fifty knots which is the maximum limit *The New New Thing* Michael Lewis, Michael M. Lewis, 1999 Lewis follows Jim Clark the founder of Silicon Graphics and Netscape as he launches his latest company Healtheon Clark has his next project in mind as well a computerized yacht that he can sail remotely from anywhere in the world *The New New Thing: A Silicon Valley Story* Michael Lewis, 1999-10-17 New York Times Bestseller A superb book Lewis makes Silicon Valley as thrilling and intelligible as he made Wall Street in his best selling *Liar's Poker* Time In the weird glow of the dying millennium Michael Lewis set out on a safari through Silicon Valley to find the world's most important technology entrepreneur He found this in Jim Clark a man whose achievements include the founding of three separate billion dollar companies Lewis also found much more and the result the best selling book *The New New Thing* is an ingeniously conceived history of the Internet revolution , *The Software License Unveiled* Douglas E. Phillips, 2009-06-01 Millions of computer users regularly bind themselves to software license terms with the click of a mouse usually without reading anything but the word agree Licenses for software as diverse as Microsoft Windows and Linux and terms of use for websites such as Facebook are all subject not only to intellectual property and commercial law but also to the private law of the license which comes in many forms each with its advocates Microsoft for example maintains that its proprietary model gives users the rights they need while creating the incentives that have made the United States the global software leader while Richard Stallman creator of the GNU General Public License and author of a number of free software programs asserts that proprietary licensing enables software companies to hoard software they should be sharing In *The Software License Unveiled* Douglas Phillips looks at both of these extremes and questions how these proliferating but largely unread license terms affect access to software one of the economy's most valuable resources While highlighting the

obvious divergences he makes the more illuminating case that most current models spanning the spectrum from proprietary to free have one key feature in common to an increasing extent each license model extends modifies or displaces public law that would otherwise apply Unlike books that advocate one form of licensing or another this one reframes the debate to propose that going forward a key challenge for lawyers scholars policymakers and the public is to consider whether legislation by license should be the means for controlling software access

A Better Way to Build Michael R. Adamson, 2013-01-15 While architects have been the subject of many scholarly studies we know very little about the companies that built the structures they designed This book is a study in business history as well as civil engineering and construction management It details the contributions that Charles J Pankow a 1947 graduate of Purdue University and his firm have made as builders of large often concrete commercial structures since the company's foundation in 1963 In particular it uses selected projects as case studies to analyze and explain how the company innovated at the project level The company has been recognized as a pioneer in design build a methodology that involves the construction company in the development of structures and substitutes negotiated contracts for the bidding of architects plans The Pankow companies also developed automated construction technologies that helped keep projects on time and within budget The book includes dozens of photographs of

buildings under construction from the company's archive and other sources. At the same time, the author analyzes and evaluates the strategic decision making of the firm through 2004, the year in which the founder died. While Charles Pankow figures prominently in the narrative, the book also describes how others within the firm adapted the business so that the company could survive a commercial market that changed significantly as a result of the recession of the 1990s. Extending beyond the scope of most business biographies, this book is a study in industry innovation and the power of corporate culture as well as the story of one particular company and the individuals who created it.

Digital Disciplines Joe Weinman, 2015-07-27. Leverage digital technologies to achieve competitive advantage through market leading processes, products, and services; customer relationships and innovation. How does Information Technology enable competitive advantage? *Digital Disciplines* details four strategies that exploit today's digital technologies to create unparalleled customer value. Using non-technical language, this book describes the blueprints that any company, large or small, can use to gain or retain market leadership based on insights derived from examining modern digital giants such as Amazon, Netflix, and Uber; established firms such as Burberry, GE, Nike, and Procter & Gamble; and lesser-known innovators such as Alvio Fruition Sciences, Opower, and Quirky. Companies can develop a competitive edge through four digital disciplines: information excellence, solution leadership, collective intimacy, and accelerated innovation that exploit cloud computing, big data, and analytics, mobile and wireline networks, social media, and the Internet of Things. These four disciplines extend and update the value disciplines of operational excellence, product leadership, and customer intimacy originally

defined by Michael Treacy and Fred Wiersema in their bestselling business classic *The Discipline of Market Leaders*. Operational excellence must now be complemented by information excellence leveraging automation, information analytics, and sophisticated algorithms to make processes faster, better, and more cost effective, seamlessly fuse digital and physical worlds, and generate new revenue through techniques such as exhaust data monetization. Product leadership must be extended to solution leadership, smart digital products and services ranging from wind turbines and wearables to connected healthcare linked to each other, cloud services, social networks, and partner ecosystems focused on customer outcomes and creating experiences and transformations. Customer intimacy is evolving to collective intimacy as face-to-face relationships not only go online but are collectively analyzed to provide individually targeted recommendations and personalized services ranging from books and movies to patient-specific therapies. Traditional innovation is no longer enough; accelerated innovation goes beyond open innovation to exploit crowdsourcing, idea markets, innovation networks, challenges, and contest economics to dramatically improve processes, products, and relationships. This book provides a strategy framework, empirical data, case studies, deep insights, and pragmatic steps for any enterprise to follow and attain market leadership in today's digital era. It addresses improved execution through techniques such as gamification and pitfalls to beware, including cybersecurity, privacy, and unintended consequences. Digital Disciplines can be exploited by existing firms or start-ups to disrupt established ways of doing business through innovative, digitally enabled value propositions to win in competitive markets in today's digital era.

The New New Journalism Robert Boynton, 2007-12-18. Forty years after Tom Wolfe, Hunter S. Thompson, and Gay Talese launched the New Journalism movement, Robert S. Boynton sits down with nineteen practitioners of what he calls the New New Journalism to discuss their methods, writings, and careers. The New New Journalists are first and foremost brilliant reporters who immerse themselves completely in their subjects. Jon Krakauer accompanies a mountaineering expedition to Everest. Ted Conover works for nearly a year as a prison guard. Susan Orlean follows orchid fanciers to reveal an obsessive subculture few knew existed. Adrian Nicole LeBlanc spends nearly a decade reporting on a family in the South Bronx. And like their muckraking early twentieth-century precursors, they are drawn to the most pressing issues of the day: Alex Kotlowitz, Leon Dash, and William Finnegan to race and class; Ron Rosenbaum to the problem of evil; Michael Lewis to boom and bust economies; Richard Ben Cramer to the nitty-gritty of politics. How do they do it? In these interviews, they reveal the techniques and inspirations behind their acclaimed works from their felt-tip pens, tape recorders, long car rides, and assumed identities to their intimate understanding of the way a truly great story unfolds. Interviews with Gay Talese, Jane Kramer, Calvin Trillin, Richard Ben Cramer, Ted Conover, Alex Kotlowitz, Richard Preston, William Langewiesche, Eric Schlosser, Leon Dash, William Finnegan, Jonathan Harr, Jon Krakauer, Adrian Nicole LeBlanc, Michael Lewis, Susan Orlean, Ron Rosenbaum, Lawrence Weschler, Lawrence Wright.

Thinking Like Einstein Thomas G. West, 2010-03-05. Albert Einstein once said that all of his most important and productive thinking was done by playing with images in his

imagination Only in a secondary stage did he translate with great effort he says these images into the language of words and mathematics that could be understood by others According to Thomas G West Einstein was a classic example of a strong visual thinker a person who tends to think in images and visual patterns and sometimes has difficulty with words and numbers In his awarding winning book *In the Mind's Eye* West discussed the connections between highly talented visually oriented persons like Einstein and certain learning disabilities such as dyslexia Now in *Thinking Like Einstein* West investigates the new worlds of visual thinking insight and creativity made possible by computer graphics and information visualization technologies He argues that with the rapid spread of inexpensive and powerful computers we are now at the beginning of a major transition moving from an old world based mainly on words and numbers to a new world where high level work in all fields will eventually involve insights based on the display and manipulation of complex information using moving computer images West profiles several highly creative visual thinkers such as James Clerk Maxwell Nikola Tesla and Richard Feynman pointing out that there is a long history of using visualization rather than words or numbers to solve problems Citing the longstanding historical conflicts between image lovers and image haters West examines the relationship of art scientific knowledge and differences in brain capabilities observing how modern visual thinkers with visualization technologies seem to have learned how to cut through the problems of overspecialization in academia and in the workplace West predicts that computer visualization technology will radically change the way we all work and think For thousands of years the technology of writing and reading has tended to promote the dominance of the left hemisphere of the brain with its linear processing of words and numbers Now the spread of graphical computer technologies is permitting a return to our visual roots with a new balance between hemispheres and ways of thinking presenting new opportunities for problem solving and big picture thinking Thus he argues that the newest technologies will help us to reaffirm some of our oldest capabilities allowing us to see previously unseen patterns and to restore a balance in thought and action New Media, Old Media

Wendy Hui Kyong Chun, Thomas Keenan, 2006 In this history of new media technologies leading media and cultural theorists examine new media against the background of traditional media such as film photography and print in order to evaluate the multiple claims made about the benefits and freedom of digital media **Biggs on Finance, Economics, and the Stock Market** Barton Biggs, 2014-03-19 Released to the public for the first time writings by the incomparable Barton Biggs Long considered one of the best brains on Wall Street Barton Biggs acquired the stature of a legend within his lifetime Among his many coups he accurately called the rise and fall of the dot com market and was an energetic promoter of emerging markets including China well before American businesses began flocking there and he made vast fortunes for his clients in the process But as this fascinating book confirms it wasn't Biggs's genius as a market analyst and hedge fund manager alone that made him special The product of a keen and broad ranging intellect in full command of his subjects and the English language the letters compiled in this volume leave no doubt that Barton Biggs was one of the most interesting observers of Wall Street

the financial world and the human comedy ever to set pen to paper Released from Morgan Stanley s archives and made public for the first time the letters compiled in this volume add new luster to Biggs s reputation as a first class finance author Address the most essential aspects of high frequency trading from formulation of ideas to performance evaluation Shares Biggs s fascinating insights and uncannily accurate predictions about an array of economic and financial topics liberally peppered with historical references and wry humor Organized thematically the letters showcase Barton Biggs s observations on finance economics and the stock market from 1980 to 2003

Time's Arrow, Time's Cycle Peter A. Coclanis, 2006 No part of the world has been affected more by globalization in recent decades than Southeast Asia This has led many observers to believe that the region s present experience with globalization is at once unprecedented inevitable and irreversible Professor Peter A Coclanis challenges such beliefs and in so doing provides a

history of globalization in Southeast Asia over the past two millennia Employing Stephen Jay Gould's famous temporal metaphors time's arrow and time's cycle Coclanis traces the trajectory of globalization arguing that globalization has ebbed and flowed in the region over the centuries that globalization is best viewed as a process rather than a permanent condition and that its effects have differed considerably across space and over time Professor Peter A Coclanis is Associate Provost for International Affairs and Albert R Newsome Professor of History and Economics at the University of North Carolina at Chapel Hill He was Raffles Visiting Professor in the Department of History at the National University of Singapore in 2005
