Getting Started with Tiva ARM Cortex M4 Microcontrollers Dhananjay V. Gadre, Sarthak Gupta, 2017-10-16 The book presents laboratory experiments concerning ARM microcontrollers and discusses the architecture of the Tiva Cortex M4 ARM microcontrollers from Texas Instruments describing various ways of programming them Given the meager peripherals and sensors available on the kit the authors describe the design of Padma a circuit board with a large set of peripherals and sensors that connects to the Tiva Launchpad and exploits the Tiva microcontroller family's on chip features ARM microcontrollers which are classified as 32 bit devices are currently the most popular of all microcontrollers They cover a wide range of applications that extend from traditional 8 bit devices to 32 bit devices Of the various ARM subfamilies Cortex M4 is a middle level microcontroller that lends itself well to data acquisition and control as well as digital signal manipulation applications Given the prominence of ARM microcontrollers it is important that they should be incorporated in academic curriculums However there is a lack of up to date teaching material textbooks and comprehensive laboratory manuals In this book each of the microcontroller's resources digital input and output timers and counters serial communication channels analog to digital conversion interrupt structure and power management features are addressed in a set of more than 70 experiments to help teach a full semester course on these microcontrollers Beyond these physical interfacing exercises it describes an inexpensive BoB break out board that allows students to learn how to design and build standalone projects as well a number of illustrative projects

Embedded Controllers Using C and Arduino James Fiore, 2016-03-21 This is the companion laboratory manual to accompany *Embedded Controllers Using C and Arduino* The fifteen lab exercises range from introductory C programming concepts to interesting and useful device applications Exercises cover topics such as basic digital and analog input output programming and interfacing multiplexing of LED displays how to generate a true analog output use of interrupts and the like Applications include a reaction timer an event counter motor drive using PWM and an arbitrary analog waveform generator Most exercises can be completed using just a computer the low cost Arduino Uno development board and an array of small electronic parts such as LEDs resistors transistors etc Some exercises benefit from an oscilloscope This is the print version of the on line OER

Microcontroller Engineering with MSP432 Ying Bai, 2016-11-03 This book aims to develop professional and practical microcontroller applications in the ARM MDK environment with Texas Instruments MSP432P401R LaunchPad kits It introduces ARM Cortex M4 MCU by highlighting the most important elements including registers pipelines memory and I/O ports With the updated MSP432P401R Evaluation Board EVB MSP EXP432P401R this MCU provides various control functions with multiple peripherals to enable users to develop and build various modern control projects with rich control strategies Micro controller programming is approached with basic and straightforward programming codes to reduce learning curves and furthermore to enable students to build embedded applications in more efficient and interesting ways For authentic examples 37 Class programming projects are

built into the book that use MSP432P401R MCU Additionally approximately 40 Lab programming projects with MSP432P401R MCU are included to be assigned as homework
