The greatest care is taken with the object glasses, and we feel sure they are far superior to anything offered, except for very much higher priced instruments. The images shown by them is again magnified by the eyepiece H, (illustrated and described on next page). This like the base-iron H, is 14 inches long, and thus allows the body to be made lengthened, and by removing the piece further from the image, increases the magnifying power. The advantages of this will be very apparent when using it. Every part of the Microscope is made in the most thorough manner, and it is constructed with a view to the most efficient service.
