## **Mountain Environments An Examination Of The Physical Geography Of Mountains:**

**Mountain Environments** John Gerrard,1990 Using examples chosen from a variety of geographical settings and scales A J Gerrard presents a novel approach to the study of mountain environments He provides a framework in which mountains as special environments can be studied and shows how no matter what their location or origin all mountain regions share common characteristics and undergo similar shaping processes Gerrard s integrated approach combines ecological climatological hydrological volcanic and environmental management concerns in a systematic treatment of mountain geomorphology He begins by examining the special nature of mountains including a new classification of mountain types He discusses mountain ecosystems stressing the interaction between biota soil climate relief and geology examines the high energy systems of weathering and mass movement and analyzes the role of rivers and hydrology and the processes of slope evolution Two chapters are devoted to the particular characteristics of glaciation and vulcanism in mountain formation The book concludes with a discussion of the special problems that human use of mountain regions create including engineering natural hazards soil erosion and the concept of integrated development A J Gerrard is Lecturer in Geography at the University of Birmingham England *Mountain Environments* A. *Mountain Environments* Romola Parish,2014-06-03 This book breaks the ground in Geographical texts by transcending a strictly regional or topical focus It presents the opportunities and constraints that mountains and their resources offer to local and global populations the impacts of environmental and economic change development and globalisation on mountain environments Part of the Ecogeography series edited by Richard Hugget **Mediterranean Mountain Environments**

Ioannis Vogiatzakis,2012-07-02 Mediterranean mountains exhibit many similarities in their biotic ecological physical and environmental characteristics There are also many differences in terms of their human colonization pattern historic land uses and current anthropogenic pressures This book provides an introduction to these environments of mountainous areas in the Mediterranean and their changes in time and space in relation to both natural and cultural factors Mediterranean Mountain Environments places its emphasis on physical geography while adopting an integrated approach to the whole subject area The book draws examples from a wide range of environments demonstrating the interaction between human and physical processes responsible for shaping mountain areas Risks and conflicts as well as methods and tools for the conservation and management of both the natural and cultural environment are covered in the light of future challenges for the sustainable development of the Mediterranean mountains Emphasis on both mainland and island mountain ranges Combines natural and cultural approach in the topic Integrated approach facing future challenges based on the study and understanding of the historical processes that have shaped the Mediterranean mountains Key references at the end of each chapter

**Fundamentals of the Physical Environment** Peter Smithson,Ken Addison,Ken Atkinson,2005-08-02 The third edition

of this popular textbook has been extensively revised to incorporate current thinking and knowledge in the area of physical geography and the environment whilst retaining its basic structure

**MOUNTAIN GEOMORPHOLOGY** Phil Owens, Olav Slaymaker, 2014-02-04 Mountains represent one of the most inspiring and attractive natural features on the surface of the earth. Visually they dominate the landscape. However, the increasing realization of the fragility of mountain areas because of changes in land use management and climate combined with an understanding of their importance for water and other natural resources has resulted in a growing interest in mountain environments in recent years. Hence Mountain Geomorphology represents a timely and unique contribution to the literature. Written by a team of international experts, this book is divided into three sections which consider historical, functional and applied mountain geomorphology from both global and local perspectives. Historical mountain geomorphology focuses on the evolution of landforms. Functional mountain geomorphology emphasises the interaction between processes and landforms, while applied mountain geomorphology concerns the interrelationships between geomorphological processes and society. Mountain Geomorphology is a valuable source of information for students studying mountain geomorphology and also for academics and research scientists interested in mountain environments.

**Environmental Management in Practice: Vol 3** Paul Compton, Dimitri Devuyt, Luc Hens, Bhaskar Nath, 2013-01-11 Volume 3 Managing the Ecosystem focuses on those ecosystems in which human intervention has been or continues to be predominant, specifically within cities and rural areas.

**Mountain Rivers** Ellen E. Wohl, 2013-04 A comprehensive synthesis of current knowledge on mountain rivers. Discussions on fluvial geomorphology and physical processes from the scale of drainage network development to bedload movement complement summaries of mountain river chemistry and ecology. Contains chapters on drainage basins, channel processes, channel biota and human impact. Includes bandw photos. Of interest to hydrologists, geomorphologists, civil and environmental engineers and resource planners. Wohl has a Ph D in geology and has done extensive fieldwork in North America, Asia and Australia. Annotation copyrighted by Book News Inc. Portland, OR

**Geocology: An Evolutionary Approach** Richard Huggett, 2002-09-11 Animals, plants and soils interact with one another with the terrestrial spheres and with the rest of the Cosmos. On land, this rich interaction creates landscape systems or geoecosystems. Geocology investigates the structure and function of geoecosystems, their components and their environment. The author develops a simple dynamic systems model, the brash equation, to form the conceptual framework for the book, suggesting an ecological and evolutionary approach. Exploring internal ecological interactions between geoecosystems and their near-surface environments, the atmosphere, hydrosphere, toposphere and lithosphere, and external influences, both geological and cosmic. Geocology presents geoecosystems as dynamic entities constantly responding to changes within themselves and their surroundings. An evolutionary view emerges of geoeological systems and the animals, plants and soils comprising them.

providing a new way of thinking for the whole environmental complex and the rich web of interdependencies contained therein

Rivers in the Landscape Ellen Wohl, 2020-02-10 Rivers are the great shapers of terrestrial landscapes Very few points on Earth above sea level do not lie within a drainage basin Even points distant from the nearest channel are likely to be influenced by that channel Tectonic uplift raises rock thousands of meters above sea level Precipitation falling on the uplifted terrain concentrates into channels that carry sediment downward to the oceans and influence the steepness of adjacent hill slopes by governing the rate at which the landscape incises Rivers migrate laterally across lowlands creating a complex topography of terraces floodplain wetlands and channels Subtle differences in elevation grain size and soil moisture across this topography control the movement of ground water and the distribution of plants and animals Rivers in the Landscape Second Edition emphasizes general principles and conceptual models as well as concrete examples of each topic drawn from the extensive literature on river process and form The book is suitable for use as a course text or a general reference on rivers Aimed at advanced undergraduate students graduate students and professionals looking for a concise summary of physical aspects of rivers Rivers in the Landscape is designed to emphasize the connectivity between rivers and the greater landscape by explicitly considering the interactions between rivers and tectonics climate biota and human activities provide a concise summary of the current state of knowledge for physical process and form in rivers reflect the diversity of river environments from mountainous headwater channels to large lowland floodplain rivers and from the arctic to the tropics reflect the diverse methods that scientists use to characterize and understand river process and form including remote sensing field measurements physical experiments and numerical simulations reflect the increasing emphasis on quantification in fluvial geomorphology and the study of Earth surfaces in general provide both an introduction to the classic foundational papers on each topic and a guide to the latest particularly insightful and integrative references
