Step 1. Enter the vehicle normally.
Step 2. Using your key, turn "on" the ignition. Be prepared to perform the following Step before 5 seconds expires.
Step 3. <u>Within 5 seconds</u>, press and release the Valet Switch*. The system will be immediately overridden.

*Important: If a coded valet has been programmed you must enter your secret code to perform this override.

Once the activated system has been overridden, if Valet Mode is desired, holding the Valet Switch depressed for two seconds will place the system into Valet Mode.

Starter Disable

The REC-11 provides an active Starter Disable output (which engages every time the transmitter is used to lock the doors), and may be configured, if desired, to also provide an automatic (passive) Starter Disable. The optional passive Starter Disable may qualify you for an insurance discount, so please check with your insurance agent.

Active Starter Disable: Whenever the doors are locked via the transmitter, the Starter Disable will instantly engage. Unlocking the doors with the transmitter will deactivate the Starter Disable circuit, allowing the engine to be started. Please note that the Starter Disable may be configured to automatically reengage 90 seconds after the doors are unlocked by the transmitter, or, to engage automatically 90 seconds after the ignition switch is turned "off". These automatic Starter Disable options are explained in more detail in the "User Programmable Features" section of this Owner's Manual.

f) Within 10 seconds press the LOCK button on the first transmitter you wish to encode to the system. The piezo will sound then beep twice to indicate the transmitter's code is learned by the system. It is only necessary to press the LOCK button.

g) Repeat Step 5 within 10 seconds for each additional transmitter. As each transmitter is learned, the buzzer will sound, which is then followed by beeps indicating the number of the transmitters learned. The system will exit the Transmitter Programming Mode when the ignition switch is turned "off", after 18 seconds of not receiving a transmitter broadcast, or upon learning the fourth transmitter. The exiting of Transmitter Programming Mode is indicated by the piezo or horn sounding twice.

Dealer Programmable Options

Your REC-11 has operational features which may be programmed by the installing dealer. Some of these features enhance the system's operating characteristics, while others are an aid to the installer which allow extreme flexibility in adapting the system to the different design parameters of the vehicle. Please see your dealer more detailed information. The following features affect daily operation:

- **Independent Automatic Locking And Unlocking Activated By The Ignition Switch:** The system may be configured to automatically lock the doors when the ignition switch is turned "on", and automatically unlock them when the ignition switch is turned "off". This system allows the unique capability of only automatically locking, and not unlocking them; or, if installed with driver door unlock capability, unlocking only the driver's door when the ignition switch is turned "off". The last option is highly desirable as a child safety feature.

Programming Transmitters

Programming Transmitters To Operate Your System: To use an additional or replacement transmitter, it's unique digital code must first be added to the control module's memory. The dealership where you purchased your system can provide and program transmitters for you, or you may program the transmitters yourself if you can access the system's control module. If you wish to program a transmitter, please follow these Transmitter Programming Mode procedures carefully:

1) Have all the transmitters that you wish to operate your system at hand. Any time a transmitter code is programmed into your system, all existing codes are automatically erased. This, in addition to the Automatic Transmitter Verification™ feature, prevents someone from adding an unauthorized transmitter to your system.

2) Access the system's control module and locate the Valet Switch.

3) Turn the ignition switch "on"; within 5 seconds press the Valet Switch five times. The buzzer will sound briefly.

4) Press the Valet Switch once again*. The system will respond by briefly sounding the buzzer followed by two beeps, indicating Transmitter Programming Mode has been entered.
*Important: If a coded valet has been programmed you must enter your secret code at this point, follow steps 4a & 4b only if you have a secret coded valet.
4a) Press the Valet Switch equal to the first digit in your secret code. The piezo or horn will emit 1 long chirp followed by 1 short chirp.
4b) Press the Valet Switch equal to the second digit in your secret code. The piezo or horn will emit 1 long chirp followed by 2 short chirps.

Activating The Trunk Release Also Unlocks The Doors: This system allows you to make the choice of whether the convenience of using your transmitter to gain trunk or hatch entry will also unlock the doors as part of the same operation. As received from the factory this feature is activated. Even if the vehicle is configured to have the transmitter unlock the driver's first, all of the doors will unlock when the remote trunk release is utilized.

- **Automatic Door Locking Operation:** This system is capable of performing two forms of automatic door locking if desired, as these features are not activated at the factory.

In the first form, the system will lock the doors automatically 90 seconds after the ignition switch is turned "off". This feature ensures that the doors will become locked every time you exit the vehicle and leave it unattended.

The second form of automatic locking eliminates the accidental unlocking of the doors by the accidental or unknown pressing of the transmitter's UNLOCK button when placing it in a pocket or purse. Activating this feature causes the system to automatically relock the doors 90 seconds after the UNLOCK button is pressed <u>unless</u> the ignition switch is turned "on".

Both automatic locking and automatic relocking add the security of engaging the starter interrupt circuit when the locking is performed at expiration of the 90 second period. During the 90 second period, the LED Status Light will flash rapidly as a visual indication of the impending automatic action. Once the doors have locked and the starter interrupt has engaged, the LED Status Light will slow to a steady flash as an indication and also as a theft deterrent.

Your dealer can activate either or both of these features upon installation.
