**Binders, Materials and Technologies in Modern Construction IV** Karel Dvořák, Dominik Gazdič, Iveta Hájková, 2018-06-20 16th International Conference Silicate Binders 16th ICBM 2017 Selected peer reviewed papers from the 16th International Conference Silicate Binders 2017 ICBM 2017 7 December 2017 Brno Czech Republic    **Antifungal and Antiparasitic Drug Delivery** Juan José Torrado Durán, Dolores R. Serrano, Javier Capilla, 2020-07-01 Fungal and parasitic diseases affect more than one billion people across the globe. This is one sixth of the world's population mostly located in developing countries. The lack of effective and safe treatments combined with inefficient diagnosis leads to serious chronic illness or even death. There is a discrepancy between the rate of drug resistance and the development of new medicines. Formulation of antifungal and antiparasitic drugs adapted to different administration routes is challenging bearing in mind the poor water solubility that limits their bioavailability and efficacy. There is an unmet clinical need to develop vaccines, novel formulations and drug delivery strategies that can improve the bioavailability and therapeutic effects by enhancing their dissolution increasing their chemical potency stabilizing the drug and targeting high concentrations of the drug to infection sites. This Special Issue includes ten research articles of antifungal and antiparasitic drug delivery systems.

**Bio-Based Polymers for Engineered Green Materials** Gianluca Tondi, Thomas Schnabel, 2020-05-20 With daily signals Nature is communicating us that its unconscious wicked exploitation is no more sustainable. Our socio economic system focuses on production increasing without considering the consequences. We are intoxicating ourselves on a daily bases just to allow the system to perpetuate itself. The time to switch into more natural solutions is come and the scientific community is ready to offer more natural product with comparable performance then the market products we are used to deal with. This book collects a broad set of scientific examples in which research groups from all over the world aim to replace fossil fuel based solutions with biomass derived materials. In here some of the most innovative developments in the field of bio materials are reported considering topics which goes from biomass valorization to the synthesis of high preforming bio based materials.

**Synthesis and Applications of Biopolymer Composites** Ana María Díez-Pascual, Patrizia Cinelli, 2019-07-23 This book as a collection of 17 research articles provides a selection of the most recent advances in the synthesis characterization and applications of environmentally friendly and biodegradable biopolymer composites and nanocomposites Recently the demand has been growing for a clean and pollution free environment and an evident target regarding the minimization of fossil fuel usage Therefore much attention has been focused on research to replace petroleum based commodity plastics by biodegradable materials arising from biological and renewable resources Biopolymers polymers produced from natural sources either chemically from a biological material or biosynthesized by living organisms are suitable alternatives for addressing these issues due to their outstanding properties including good barrier performance biodegradation ability and low weight However they generally possess poor mechanical properties a short fatigue life low chemical resistance poor long term durability and limited processing capability In order to overcome these deficiencies biopolymers can be reinforced with fillers or nanofillers with at least one of their dimensions in the nanometer range Bionanocomposites are advantageous for a wide range of applications such as in medicine pharmaceutics cosmetics food packaging agriculture forestry electronics transport construction and many more
