The Logic of Information Luciano Floridi, 2019-01-21 Luciano Floridi presents an innovative approach to philosophy conceived as conceptual design. He explores how we make, transform, refine, and improve the objects of our knowledge. His starting point is that reality provides the data to be understood as constraining affordances, and we transform them into information like semantic engines. Such transformation or repurposing is not equivalent to portraying or picturing or photographing or photocopying anything. It is more like cooking: the dish does not represent the ingredients; it uses them to make something else out of them, yet the reality of the dish and its properties hugely depend on the reality and the properties of the ingredients. Models are not representations understood as pictures but interpretations understood as data elaborations of systems. Thus, he articulates and defends the thesis that knowledge is design and philosophy is the ultimate form of conceptual design. Although entirely independent of Floridi's previous books *The Philosophy of Information* (OUP, 2011) and *The Ethics of Information* (OUP, 2013), *The Logic of Information* both complements the existing volumes and presents new work on the foundations of the philosophy of information.

Transforming Ergonomics with Personalized Health and Intelligent Workplaces M. Vega-Barbas, F. Seoane, 2019-06-05 Life expectancy is increasing, and we are all expected to work for longer as a result. A balance must be found between the demands of work and human capabilities, and this makes the prevention of workplace-related health problems more important than ever. Emerging technologies such as smart textiles, wearable devices, and the Internet of Things have enabled the development of intelligent biomedical clothing, and the integration of pervasive sensitive services into the environment, and together with ambient intelligence technology techniques and big data analytics have fostered a proliferation of health monitoring solutions. This book presents a collection of the most significant challenges and advances in the field of intelligent workspaces and personalized ergonomics, bringing together the most relevant results of various international research projects. The book is organized into three main sections: Personalized Ergonomics, which explores the need for practical and reliable risk assessment methods for the prevention of musculoskeletal disorders and the enhancement of the workplace; Pervasive Technology for Intelligent Workplaces, which identifies the opportunities and challenges of technology-based interventions and the security and privacy issues of the smart workplace; and Data Warehouse Governance and Analytics. The book concludes with a chapter on lessons learnt. The transformation of the working environment into a healthy and intelligent space will not only support ergonomists, employees, and employers but may also be the solution to the sustainability of our current social welfare systems, and the book will be of interest to all those concerned with workplace health.
