### Shock Absorbers

The shock absorber in the propeller plays a very important role in protecting the shafting, gears, and engine against the shock of a blow, should the propeller strike an underwater object. The shock absorber allows the propeller to stop rotating at the instant of impact while the power train continues turning.

*A cracked hub, caused by the propeller struck an underwater object. The rubber hub and propeller sleeve may be replaced at nominal cost.*

start to slip, a new hub and shock absorber would have to be installed.

*Illustration depicting the rake of a propeller, as explained in the text.*
