On The Theory Of Coveringgroups:

On the Theory of Covering-groups Henri Alphonsus Maria Jagdischandre Oedayrajsingh Varma,1961 Local Coefficients and Gamma Factors for Principal Series of Covering Groups Fan Gao,Freydoon Shahidi,Dani Szpruch,2023-03-10 View the abstract Geometry, Algebra, Number Theory, and Their Information Technology Applications Amir Akbary,Sanoli Gun,2018-09-18 This volume contains proceedings of two conferences held in Toronto Canada and Kozhikode India in 2016 in honor of the 60th birthday of Professor Kumar Murty The meetings were focused on several aspects of number theory The theory of automorphic forms and their associated L functions Arithmetic geometry with special emphasis on algebraic cycles Shimura varieties and explicit methods in the theory of abelian varieties The emerging applications of number theory in information technology Kumar Murty has been a substantial influence in these topics and the two conferences were aimed at honoring his many contributions to number theory arithmetic geometry and information technology Differential Geometry and Complex Analysis I. Chavel,H.M. Farkas,2012-12-06 This volume is dedicated to the memory of Harry Ernest Rauch who died suddenly on June 18 1979 In organizing the volume we solicited i articles summarizing Rauch s own work in differential geometry complex analysis and theta functions ii articles which would give the reader an idea of the depth and breadth of Rauch s researches interests and influence in the fields he investigated and iii articles of high scientific quality which would be of general interest In each of the areas to which Rauch made significant contribution pinching theorems teichmiiller theory and theta functions as they apply to Riemann surfaces there has been substantial progress Our hope is that the volume conveys the originality of Rauch s own work the continuing vitality of the fields he influenced and the enduring respect for and tribute to him and his accom plishments in the mathematical community Finally it is a pleasure to thank the Department of Mathematics of the Grad uate School of the City University of New York for their logistical support James Rauch who helped us with the biography and Springer Verlag for all their efforts in producing this volume Isaac Chavel Hershel M Farkas Contents Harry Ernest Rauch Biographical Sketch VII Bibliography of the Publications of H E Rauch X Ph D Theses Written under the Supervision of H E Rauch XIII H E Rauch Geometre Differentiel by M Berger Lie Groups and Compact Groups John F. Price,1977-06-02 Provides a self contained introduction to Lie groups and makes results about the structure of Lie groups and compact groups available to a wide audience Lie Groups I Mikio Ise,Masaru Takeuchi,1991 The first part of this book which is the second edition of the book of the same title is intended to provide readers with a brief introduction to the theory of Lie groups as an aid to further study by presenting the fundamental features of Lie groups as a starting point for understanding Lie algebras and Lie theory in general In the revisions for the second edition proofs of some of the results were added The second part of the book builds on some of the background developed in the first part offering an introduction to the theory of symmetric spaces a remarkable example of applications of Lie group theory to differential geometry The book emphasizes this aspect by surveying the fundamentals of

Riemannian manifolds and by giving detailed explanations of the way in which geometry and Lie group theory come together

Flows on Compact Surfaces Nelson G. Markley,Mary Vanderschoot,2023-07-18 This textbook offers a uniquely accessible introduction to flows on compact surfaces filling a gap in the existing literature The book can be used for a single semester course and or for independent study It demonstrates that covering spaces provide a suitable and modern setting for studying the structure of flows on compact surfaces The thoughtful treatment of flows on surfaces uses topology especially covering spaces the classification of compact surfaces and Euclidean and hyperbolic rigid motions to establish structural theorems that describe flows on surfaces generally Several of the topics from dynamical systems that appear in this book e g fixed points invariant sets orbits almost periodic points also appear in the many subareas of dynamical systems The book successfully presents the reader with a self contained introduction to dynamical systems or an expansion of one s existing knowledge of the field Prerequisites include completion of a graduate level topology course a background in dynamical systems is not assumed Fifth International Congress of Chinese Mathematicians Lizhen Ji,2012 This two part volume represents the proceedings of the Fifth International Congress of Chinese Mathematicians held at Tsinghua University Beijing in December 2010 The Congress brought together eminent Chinese and overseas mathematicians to discuss the latest developments in pure and applied mathematics Included are 60 papers based on lectures given at the conference

Eisenstein Series and Automorphic L-Functions Freydoon Shahidi,2025-04-07 This book presents a treatment of the theory of L functions developed by means of the theory of Eisenstein series and their Fourier coefficients a theory which is usually referred to as the Langlands Shahidi method The information gathered from this method when combined with the converse theorems of Cogdell and Piatetski Shapiro has been quite sufficient in establishing a number of new cases of Langlands functoriality conjecture at present some of these cases cannot be obtained by any other method These results have led to far reaching new estimates for Hecke eigenvalues of Maass forms as well as definitive solutions to certain problems in analytic and algebraic number theory This book gives a detailed treatment of important parts of this theory including a rather complete proof of Casselman Shalika s formula for unramified Whittaker functions as well as a general treatment of the theory of intertwining operators It also covers in some detail the global aspects of the method as well as some of its applications to group representations and harmonic analysis This book is addressed to graduate students and researchers who are interested in the Langlands program in automorphic forms and its connections with number theory **Pacific Journal of Mathematics** ,1988-12 **Journal of the Mathematical Society of Japan** Nihon Sūgakkai,1948 Lie Groups and Algebras with Applications to Physics, Geometry, and Mechanics D.H. Sattinger,O.L. Weaver,2013-11-11 This book is intended as an introductory text on the subject of Lie groups and algebras and their role in various fields of mathematics and physics It is written by and for researchers who are primarily analysts or physicists not algebraists or geometers Not that we have eschewed the algebraic and geo metric developments But we wanted to present them in a

concrete way and to show how the subject interacted with physics geometry and mechanics These interactions are of course manifold we have discussed many of them here in particular Riemannian geometry elementary particle physics sym metries of differential equations completely integrable Hamiltonian systems and spontaneous symmetry breaking Much ofthe material we have treated is standard and widely available but we have tried to steer a course between the descriptive approach such as found in Gilmore and Wybourne and the abstract mathematical approach of Helgason or Jacobson Gilmore and Wybourne address themselvesto the physics community whereas Helgason and Jacobson address themselves to the mathematical community This book is an attempt to synthesize the two points of view and address both audiences simultaneously We wanted to present the subject in a way which is at once intuitive geometric applications oriented mathematically rigorous and accessible to students and researchers without an extensive background in physics algebra or geometry **Introduction to Elliptic Curves and Modular Forms** N. Koblitz,2012-12-06 This textbook covers the basic properties of elliptic curves and modular forms with emphasis on certain connections with number theory The ancient congruent number problem is the central motivating example for most of the book My purpose is to make the subject accessible to those who find it hard to read more advanced or more algebraically oriented treatments At the same time I want to introduce topics which are at the forefront of current research Down to earth examples are given in the text and exercises with the aim of making the material readable and interesting to mathematicians in fields far removed from the subject of the book With numerous exercises and answers included the textbook is also intended for graduate students who have completed the standard first year courses in real and complex analysis and algebra Such students would learn applications of techniques from those courses thereby solidifying their under standing of some basic tools used throughout mathematics Graduate stu dents wanting to work in number theory or algebraic geometry would get a motivational example oriented introduction In addition advanced under graduates could use the book for independent study projects senior theses and seminar work Bulletin of the American Mathematical Society ,1986 Tamkang Journal of Mathematics ,1975

Mathematical Reviews ,2005-06 **Advanced Topics of Topology** Francisco Bulnes,2022-07-27 Topology is an area of mathematics that establishes relations and transformations between spaces with a certain structure depending on their position and considering the structure of the ambient space where these relations exist This book discusses various concepts and theories of topology including diffeomorphisms immersions Hausdorff spaces cobordisms homotopy theory symplectic manifolds topology of quantum field theory algebraic varieties dimension theory Koszul complexes continuum theory and metrizability among others **The Finite Simple Groups** Robert Wilson,2009-12-14 Thisbookisintendedasanintroductiontoallthe nitesimplegroups During themonumentalstruggletoclassifythe nitesimplegroups andindeedsince a huge amount of information about these groups has been accumulated Conveyingthisinformationtothenextgenerationofstudentsandresearchers not to mention those who might wish to apply this

knowledge has become a major challenge With the publication of the two volumes by Aschbacher and Smith 12 13 in 2004 we can reasonably regard the proof of the Classi cation Theorem for Finite Simple Groups usually abbreviated CFSG as complete Thus it is timely to attempt an overview of all the non abelian nite simple groups in one volume For expository purposes it is convenient to divide them into four basic types namely the alternating classical exceptional and sporadic groups The study of alternating groups soon develops into the theory of per tation groups which is well served by the classic text of Wielandt 170 and more modern treatments such as the comprehensive introduction by Dixon and Mortimer 53 and more specialised texts such as that of Cameron 19 **Select Topics in Signal Analysis** Harish Parthasarathy,2022-10-20 This book developed from a course given by the author to undergraduate and postgraduate students It takes up Matrix Theory Antenna Theory and Probability Theory in detail The first chapter on matrix theory discusses in reasonable depth the theory of Lie Algebras leading upto Cartan s Classification Theory It also discusses some basic elements of Functional Analysis and Operator Theory in infinite dimensional Banach and Hilbert spaces The second chapter discusses Basic Probability Theory and the topics discussed find applications to Stochastic Filtering Theory for differential equations driven by white Gaussian noise The third chapter is on Antenna Theory with a focus on Modern Quantum Antenna Theory The book will be a valuable resource to students and early career researchers in the field of Mathametical Physics *Lie Groups* Wulf Rossmann,2006 Lie Groups is intended as an introduction to the theory of Lie groups and their representations at the advanced undergraduate or beginning graduate level It covers the essentials of the subject starting from basic undergraduate mathematics The correspondence between linear Lie groups and Lie algebras is developed in its local and global aspects The classical groups are analysed in detail first with elementary matrix methods then with the help of the structural tools typical of the theory of semisimple groups such as Cartan subgroups roots weights and reflections The fundamental groups of the classical groups are worked out as an application of these methods Manifolds are introduced when needed in connection with homogeneous spaces and the elements of differential and integral calculus on manifolds are presented with special emphasis on integration on groups and homogeneous spaces Representation theory starts from first principles such as Schur s lemma and its consequences and proceeds from there to the Peter Weyl theorem Weyl s character formula and the Borel Weil theorem all in the context of linear groups
