Balancing Renewable Electricity Bert Droste-Franke, Boris Paal, Christian Rehtanz, Dirk Uwe Sauer, Jens-Peter Schneider, Miranda Schreurs, Thomas Ziesemer, 2012-02-02 An important aim behind the restructuring of Germany's and Europe's electricity systems is to reduce the environmental burden especially with respect to greenhouse gas emissions of the current systems Emissions must be brought down to a level that is sustainable in the long run and consistent with greenhouse gas emission reduction goals Meeting these goals will require a system as best as current knowledge suggests that will be able to cope simultaneously with the fundamental demands for economic efficiency environmental sustainability and supply security Making use of existing scenarios this study sketches such a system It focuses in particular on auxiliary systems such as energy storage methods and network extensions The study introduces technologies that can balance electricity in energy systems and that can serve as enabling technologies for the integration of large quantities of renewable energies in the power supply system It begins with a discussion of normative aims for the future electricity system before continuing with a description of current policies and political developments and an overview of relevant existing energy system studies These sections serve as background for the remainder of the study They are followed by discussion and analysis of the growing demand for means to balance the fluctuations found in electricity generated in power systems with a high penetration of renewable energies the potentials of diverse technologies requirements for electrical networks economic impacts and important legal issues Finally the main challenges to the achievement of developing balancing technologies and processes for renewable electricity dominant systems are summarised and recommendations made **Improving Energy Decisions** Bert Droste-Franke, M. Carrier, M. Kaiser, Miranda Schreurs, Christoph Weber, Thomas Ziesemer, 2014-11-01 Managing a successful transition of the current energy supply system to less carbon emitting options ensuring a safe and secure supply during the whole process and in the long term is one of the largest challenges of our time Various approaches and first implementations show that it is not only technological issue but also a matter of societal acceptance and acceptability considering basic ethic values of the society The main foci of the book are thus to develop an understanding about the specific challenges of the scientific policy advice in the area to explore typical current approaches for the analysis of future energy systems and to develop criteria for the quality assessment and guidelines for the improvement of such studies The book provides assistance to the interpretation of existing studies and guidelines for setting up and carrying out new analyses as well as for communicating and applying the results Thereby it aims to support the involved actors such as the respective scientific experts and researchers as well as decision makers energy suppliers stakeholders and the interested public in designing procedures for a successful transition process The study elaborates consistent interdisciplinary advice as contribution for realising a continuously safe and secure long term viable energy supply in spite of diverse interests multi level responsibilities multi dimensional processes large uncertainties and lack of knowledge about future developments

An Ethical Evaluation of Lethal Functions in Autoregulative Weapons Systems Nicole Kunkel, 2024-12-30 This book connects two of the most pressing ethical topics of our time questions of peace and technology materialized in so called autonomous weapons systems which can operate without human control and intervention in real time The author however criticizes the term autonomy as too anthropomorphic and therefore misleading She consequently proposes using the term autoregulation in its place Taking a contingent pacifist stance this book addresses the question of whether such technological means help or hinder peace processes The argument is tripartite First it is demonstrated that the risk of harm to nonparticipants is very likely to increase Second and with respect to responsibility it is indicated that a human machine system can only be operated responsibly if a human is in control Finally this idea is transferred into theological thought through reference to Bonhoeffer's idea of incurring guilt in acting responsibly In that context autoregulative technology might pose the possibility of shying away from responsibility and therefore becoming guilty This book is among the first ethical considerations of lethal autoregulative weaponry from a contingent pacifist stance and brings together peace ethical thinking and theories from various backgrounds

Ethical Assessments of Emerging Technologies Federica Lucivero, 2015-11-13 This book systematically addresses the issue of assessing the normative nature of visions of emerging technologies in an epistemologically robust way In the context of democratic governance of emerging technologies not only it is important to reflect on technologies moral significance but also to address their emerging and future oriented character The book proposes an original approach to deal with the issue of plausible ethical evaluation of new technologies Taking its start from current debates about Technology Assessment the proposed solution emerges as a combination of theoretical and methodological insights from the fields of Philosophy of Technology Science and Technology Studies and a normative justification based on pragmatist ethics The book's main contribution is to engage a diverse and interdisciplinary audience ethicists philosophers social scientists technology assessment researchers and practitioners in a reflection concerning the epistemological challenges that are associated to the endeavour of appraising the moral significance of emerging technologies in the attempt of democratically governing them It brings together concepts and methodologies from different disciplines and shows their synergy in applying them to two specific case studies of emerging biomedical technologies

Scholarship Assessed Charles E. Glassick, Mary Taylor Huber, Gene I. Maeroff, 1997-08-15 Scholarship Assessed continues the exploration begun by Scholarship Reconsidered It examines the changing nature of scholarship in today's colleges and universities and proposes new standards with a special emphasis on methods for assessment and documentation Begun under the oversight of Ernest L Boyer and based on the findings of the Carnegie Foundation's National Survey on the Reexamination of Faculty Roles and Rewards Scholarship Assessed provides a base of information for and gives focus to the debate of institutional standards of rigor and quality
