 Tippet, Todd M. Milford, 2019-07-01 This book offers a meso level description of demographics science education and science
 teacher education Representing all 13 Canadian jurisdictions the book provides local insights that serve as the basis for
 exploring the Canadian system as a whole and function as a common starting point from which to identify causal
 relationships that may be associated with Canada s successes The book highlights commonalities consistencies and
 distinctions across the provinces and territories in a thematic analysis of the 13 jurisdiction specific chapters Although the
 analysis indicates a network of policy and practice issues warranting further consideration the diverse nature of Canadian
 science education makes simple identification of causal relationships elusive Canada has a reputation for strong science
 achievement However there is currently limited literature on science education in Canada at the general level or in specific
 areas such as Canadian science curriculum or science teacher education This book fills that gap by presenting a thorough
 description of science education at the provincial territorial level as well as a more holistic description of pressing issues for
 Canadian science education **Science Inquiry, Argument and Language** , 2019-02-18 Science Inquiry Argument and

Language describes research that has focused on addressing the issue of embedding language practices within science inquiry through the use of the Science Writing Heuristic approach In recent years much attention has been given to two areas of science education scientific argumentation and science literacy The research into scientific argument have adopted different orientations with some focusing on science argument as separate to normal teaching practices that is teaching students about science argument prior to using it in the classroom context while others have focused on embedding science argument as a critical component of the inquiry process The current emphasis on science literacy has emerged because of greater understanding of the role of language in doing and reporting on science Science is not viewed as being separate from language and thus there is emerging research emphasis on how best to improving science teaching and learning through a language perspective Again the research orientations are parallel to the research on scientific argumentation in that the focus is generally between instruction separate to practice as opposed to embedding language practices within the science classroom context
