Nervous System Study Guide

Introduction:

The nervous system is the master coordinating system of the body. Every thought, action, and sensation reflects its activity. Because of its complexity, the structures of the nervous system are described in terms of two principal divisions—the central nervous system (CNS) and the peripheral nervous system (PNS). The CNS, consisting of the brain and spinal cord, interprets incoming sensory information and issues instructions based on past experience. The PNS, consisting of cranial and spinal nerves and ganglia, provides the communication lines between the CNS and the body's muscles, glands, and sensory receptors. The nervous system is also divided functionally in terms of motor activities into the somatic and autonomic divisions. It is important, however, to recognize that these classifications are made for the sake of convenience and that the nervous system acts in an integrated manner both structurally and functionally.

Questions:

1. List the three major functions of the nervous system.

- a. Sensations (sensory input)
- b. Interpretation (integration of info)
- c. Response (commands responses)

2. Choose the key responses that best correspond to the descriptions provided in the following statements. Insert the appropriate letter or term in the answer blanks.

KEY CHOICES: A. Autonomic nervous system
 C. Peripheral nervous system

 B. Central nervous system
 D. Somatic nervous system

- B 1. Nervous system subdivision that is composed of the brain and spinal cord.
- D 2. Subdivision of the PNS that controls voluntary activities such as the activation of skeletal muscles.
- C 3. Nervous system subdivision that is composed of the cranial and spinal nerves and ganglia.
- A 4. Subdivision of the PNS that regulates the activity of the heart and smooth muscle and of glands; it is also called the involuntary nervous system.
- B 5. A major subdivision of the nervous system that interprets incoming information and issues orders.
- C 6. A major subdivision of the nervous system that serves as communication lines, linking all parts of the body to the CNS.
