

Chapter 1: Intro

What is a function?

What is a function?

A function is a rule that assigns to each input exactly one output. It is a relationship between a set of inputs and a set of outputs, where each input is associated with exactly one output.

For example, the function $f(x) = 2x + 1$ takes an input x and produces an output $2x + 1$. If $x = 3$, then $f(3) = 2(3) + 1 = 7$. If $x = 4$, then $f(4) = 2(4) + 1 = 9$.

Functions are used to model many real-world phenomena, such as the relationship between time and distance, or between temperature and altitude.
