Bay, 2012 The history of the medical and scientific debate about the etiology of the disease as it played out between diet theorists and contagionists from 1880 to 1940 In modern Japan beriberi or thiamin deficiency became a public health problem that cut across all social boundaries afflicting even the Meiji Emperor During an age of empire building for the Japanese nation incidence rates in the military ranged from 30 percent in peacetime to 90 percent during war Doctors and public health officials called beriberi a national disease because it festered within the bodies of the people and threatened the health of the empire Nevertheless they could not agree over what caused the disease attributing it to a diet deficiency or a microbe In *Beriberi in Modern Japan* Alexander R Bay examines the debates over the etiology of this national disease during the late nineteenth and early twentieth centuries Etiological consensus came after World War I but the struggle at the national level to direct beriberi prevention continued peaking during wartime mobilization War served as the context within which scientific knowledge of beriberi and its prevention was made The story of beriberi research is not simply about the march toward the inevitable discovery of the beriberi vitamin but rather the history of the role of medicine in state making and empire building in modern Japan Alexander Bay is assistant professor of history at Chapman University

Lost in Cyurbia James Harkin, 2010-09-07 The early twentieth century saw the slow but steady exodus of the population from inner cities to the suburbs We are currently witnessing a similar transformation as our new century establishes itself but in an entirely different realm As new technologies proliferate personal computers the communication gadgetry of mobile devices and access to the internet our culture is participating in a mass electronic migration James Harkin christens this destination to Cyurbia the ether of online where we spend so much of our lives Once upon a time there were no text messaging no e mail and no social networking sites like Facebook Bebo Twitter and MySpace The introduction of these new forums for communication has radically transformed the way that we live and we can only guess what will come next Innovative and extremely timely *Lost in Cyurbia* describes the architecture of our digital life how it has developed over the past seventy years and how it will evolve in the future The narrative recounts how the theories of Norbert Weiner the inventor of cybernetics and Marshall McLuhan inspired the counterculture radicals in the sixties and seventies and traces how their pioneering idealistic and theoretical work laid the groundwork for a system whose central idea is bringing about direct communication between peers outside the reach of authority Harkin explores what it means to be in the loop and our obsession with instant access to information and how it is shared over networks and considers what has been lost and what has been gained Are we more connected than ever before or more isolated Have our thinking processes been forever altered Is the democratic nature of the net slowly being eroded by corporate interests Or as once hoped will the net enable the awakening of a new kind of global consciousness
