Viviani, 1996-05-31 Proceedings of the NATO Advanced Study Institute on Multi Sensory Control of Movement Trieste Italy 3 12 July 1994 **National Library of Medicine Current Catalog** National Library of Medicine (U.S.), *American Book Publishing Record*, 1999 **Self-consciousness and "split" Brains** Elizabeth Schechter, 2018 Could a single human being ever have multiple conscious minds Some human beings do The corpus callosum is a large pathway connecting the two hemispheres of the brain In the second half of the twentieth century a number of people had this pathway cut through as a treatment for epilepsy They became colloquially known as split brain subjects After the two hemispheres of the brain are cortically separated in this way they begin to operate unusually independently of each other in the realm of thought action and conscious experience almost as if each hemisphere now had a mind of its own Philosophical discussion of the split brain cases has overwhelmingly focused on questions of psychological identity in split brain subjects questions like How many subjects of experience is a split brain subject How many intentional agents How many persons On the one hand under experimental conditions split brain subjects often act in ways difficult to understand except in terms of each of them having two distinct streams or centers of consciousness Split brain subjects thus evoke the duality intuition that a single split brain human being is somehow composed of two thinking experiencing and acting things On the other hand a split brain subject nonetheless seems like one of us at the end of the day rather than like two people sharing one body In other words split brain subjects also evoke the unity intuition that a split brain subject is one person Elizabeth Schechter argues that there are in fact two minds subjects of experience and intentional agents inside each split brain human being right and left On the other hand each split brain subject is nonetheless one of us The key to reconciling these two claims is to understand the ways in which each of us is transformed by self consciousness **The Multiple Functions of Sensory-motor Representations** Raffaella I. Rumiati, Raffaella I Rumiati, Alfonso Caramazza, 2005 The papers in this volume consider the role of sensory motor processes and their neural structures in higher cognitive functions such as visual and motor imagery iconic memory and temporal judgment The evidence brought to bear on this issue comes from behavioral studies of brain damaged subjects and fMRI and TMS studies with normal subjects The issue also includes several theoretical reviews and discussions *Current Catalog* National Library of Medicine (U.S.), 1993 First multi year cumulation covers six years 1965 70 Books in Print, 1994 *Directory of Published Proceedings*, 1998 **The British National Bibliography** Arthur James Wells, 1996 *The Cumulative Book Index*, 1997 A world list of books in the English language **Medical and Health Care Books and Serials in Print**, 1997 *Theory and Practice in the Interdisciplinary Production and Reproduction of Scientific Knowledge* Olga Pombo, Klaus Gärtner, Jorge Jesuino, 2023-01-10 This book addresses the urgent need for a large and

systematic analysis of current interdisciplinary ID research and practice It demonstrates how ID is essentially a cognitive phenomenon something different from the frivolous and inconsequential attempt of trying to overcome the disciplinary competencies and exigencies By ID the authors show that it is a manifestation of the transversal rationality that underlies current scientific activity It is the very progress of specialized disciplines that requires interdisciplinary new research practices and new forms of articulation between domains something that has a strong impact on the traditional disciplinary structure of scientific and educational institutions Divided into two parts the book presents a conceptual framework as well as several case studies on ID practices The book aims at covering three main themes It contributes to the stabilization of ID meaning and characterizes the main ID theorizations which have been proposed until now It builds an innovative and broad understanding of the several ID determinations as an essentially cognitive phenomenon and of its institutional implications at the level of disciplinary structures and curricular organization Finally it distinguishes and maps the diversity of ID procedures and practices which are being used and tested by contemporary scientific and educational institutions This book is addressed to philosophers scientists and every one interested in science production and reproduction including science teaching

The Neurological Bases of Language Disorders in Children Christy L. Ludlow, Mary Ellen Doran-Quine, 1980 **Subject Guide to Books in Print**, 1997 *Developmental Psychobiology* Elliott M. Blass, 2012-12-06 ELLIOTT M BLASS Fifteen years have passed since the first volume on developmental psychobiology Blass 1986 appeared in this series and 13 since the publication of the second volume Blass 1988 These volumes documented the status of the broad domain of scientific inquiry called developmental psychobiology and were also written with an eye to the future The future has been revolutionary in at least three ways First there was the demise of a descriptive ethology as we had known it to be replaced first by sociobiology and later by its more sophisticated versions based on quantitative predictions of

social interactions that reflected relatedness and inclusive fitness. Second, there was the emergence of cognitive science, including cognitive development as an enormously strong and interactive multidisciplinary effort. Making the functional brain more accessible made this revolution all the more relevant to our discipline. In the laboratory, immunocytochemical detection of immediate early genes such as *c-fos* now allows us to trace neuronal circuits activated during complex behaviors. The functional brain of primates, especially humans, was also made very accessible through neuroimaging with which we can look at and into brains as they solve and attempt to solve particular tasks. Those of us who were trained in neurology as graduate students two or three decades ago recognize only the people in white coats and patients in beds or on gurneys when we visit neurological units today. The rest is essentially new.
